**Agile Project Management** James Jackson, 2017-05-16 Scrum is an agile way to manage a project usually software development Agile software development with Scrum is often perceived as a methodology but rather than viewing Scrum as methodology think of it as a framework for managing a process What is Scrum In the agile Scrum world instead of providing complete detailed descriptions of how everything is to be done on a project much of it is left up to the Scrum software development team This is because the team will know best how to solve the problem they are presented This is why in Scrum development for example a sprint planning meeting is described in terms of the desired outcome a commitment to a set of features to be developed in the next sprint instead of a set of Entry criteria Task definitions Validation criteria Exit criteria ETVX and so on as would be provided in most methodologies Scrum relies on a self organizing cross functional team The scrum team is self organizing in that there is no overall team leader who decides which person will do which task or how a problem will be solved Those are issues that are decided by the team as a whole And in Scrum a team is cross functional meaning everyone is needed to take a feature from idea to implementation Within agile development Scrum teams are supported by two specific roles The first is a ScrumMaster who can be thought of as a coach for the team helping team members use the Scrum process to perform at the highest level For information Click on BUY BUTTON
