Pollution Research ,1999 *Local Environmental Change and Society in Africa* Mohamed Salih,2000-06-30 Social and natural scientists are currently obsessed with globalization but this has not been matched by an equal interest in the societal consequences of local environmental change Attention has thus been withdrawn from community and locality and transferred to global processes with an indifference to the reality of those at the receiving end of the social economic and political

problems that globalization create Local reality is obscured and conditions are imposed that are often insensitive to or even distort local needs resource management and production systems The case studies presented here illustrate how environmental degradation has contributed to the distortion of local institutions and economies thus denying local communities the right to live in a productive and healthy environment The contributors highlight the seriousness of the difficulties involved in conflating national policies and local reality and imposing global policy instruments on local communities Understandably the case studies demonstrate that local communities resist putting their faith in environmental policies and plans imposed on them by global or national institutions that often deprive them of access to and control over their local environment

Artificial Neural Networks in Vehicular Pollution Modelling Mukesh Khare,S.M. Shiva Nagendra,2007 Artificial neural networks ANNs which are parallel computational models comprising of interconnected adaptive processing units neurons have the capability to predict accurately the dispersive behavior of vehicular pollutants under complex environmental conditions This book aims at describing step by step procedure for formulation and development of ANN based VP models considering meteorological and traffic parameters The model predictions are compared with existing line source deterministic statistical based models to establish the efficacy of the ANN technique in explaining frequent dispersion complexities in urban areas The book is very useful for hardcore professionals and researchers working in problems associated with urban air pollution management and control
