Algorithms Live Computer Science Decisions :

Algorithms to Live By By Brian Christian, Tom Griffiths, 2016-04-19 An exploration of how computer algorithms can be applied to our everyday lives to solve common decision making problems and illuminate the workings of the human mind What should we do or leave undone in a day or a lifetime How much messiness should we accept What balance of the new and familiar is the most fulfilling These may seem like uniquely human quandaries but they are not Computers like us confront limited space and time so computer scientists have been grappling with similar problems for decades And the solutions they've found have much to teach us In a dazzlingly interdisciplinary work Brian Christian and Tom Griffiths show how algorithms developed for computers also untangle very human questions They explain how to have better hunches and when to leave things to chance how to deal with overwhelming choices and how best to connect with others From finding a spouse to finding a parking spot from organizing one's inbox to peering into the future *Algorithms to Live By* transforms the wisdom of computer science into strategies for human living *Local Theories of Argument* Dale Hamble, 2021-03-25

Argumentation is often understood as a coherent set of Western theories birthed in Athens and developing throughout the Roman period the Middle Ages the Enlightenment and Renaissance and into the present century Ideas have been nuanced developed and revised but still the outline of argumentation theory has been recognizable for centuries or so it has seemed to Western scholars The 2019 Alta Conference on Argumentation co-sponsored by the National Communication Association and the American Forensic Association aimed to question the generality of these intellectual traditions This resulting collection of essays deals with the possibility of having local theories of argument local to a particular time a particular kind of issue a particular place or a particular culture Many of the papers argue for reconsidering basic ideas about arguing to represent the uniqueness of some moment or location of discourse Other scholars are more comfortable with the Western traditions and find them congenial to the analysis of arguments that originate in discernibly distinct circumstances The papers represent different methodologies cover the experiences of different nations at different times examine varying sorts of argumentative events speeches court decisions food choices and sound explore particular personal identities and the issues highlighted by them and have different overall orientations to doing argumentation scholarship Considered together the essays do not generate one simple conclusion but they stimulate reflection about the particularity or generality of the experience of arguing and therefore the scope of our theories *Summary of Algorithms to Live By* Readtrepreneur

Simple Heuristics that Make Us Smart Gerd Gigerenzer, Peter M. Todd, ABC Research Group, 2000-10-12 Simple Heuristics That Make Us Smart invites readers to embark on a new journey into a land of rationality that differs from the familiar territory of cognitive science and economics Traditional views of rationality tend to see decision makers as possessing superhuman powers of reason limitless knowledge and all of eternity in which to ponder choices To understand decisions in the real world we need a different more psychologically plausible notion of rationality and this book provides it It is about fast and frugal heuristics simple rules for making decisions when time is pressing and deep thought an unaffordable luxury These heuristics can enable both living organisms and artificial systems to make smart choices classifications and predictions by employing bounded rationality But when and how can such fast and frugal heuristics work Can judgments based simply on one good reason be as accurate as those based on many reasons Could less knowledge even lead to systematically better predictions than more knowledge Simple Heuristics explores these questions developing computational models of heuristics and testing them through experiments and analyses It shows how fast and frugal heuristics can produce adaptive decisions in situations as varied as choosing a mate dividing resources among offspring predicting high school drop out rates and playing the stock market As an interdisciplinary work that is both useful and engaging this book will appeal to a wide audience It is ideal for researchers in cognitive psychology evolutionary psychology and cognitive science as well as in economics and artificial intelligence It will also inspire anyone interested in simply making good decisions

Advances in Artificial and Human Intelligence in the Modern Era Rajest, S. Suman, Singh, Bhopendra, Obaid, Ahmed J., Regin, R., Chinnusamy, Karthikeyan, 2023-09-11 In the realm of psychological and brain sciences there is a growing urgency to refine individual performance using personalized interventions that account for unique cognitive and biological attributes Yet the quest for such tailored approaches has proven challenging as conventional methods often fall short The limited integration of domain expertise and human judgment curtails the potential of artificial intelligence AI in effectively optimizing human performance particularly in areas like customized training health monitoring

and cognitive enhancement Bridging the gap between AI capabilities and the specific requirements of individuals becomes crucial in meeting this rising demand Advances in Artificial and Human Intelligence in the Modern Era present a transformative solution to tackle the prevailing challenges at the intersection of AI and human performance enhancement This book delves deeply into the latest empirical research literature reviews and methodological advancements to introduce precision AI techniques for personalized interventions By examining how the amalgamation of domain expertise and human insights can enhance AI performance the book establishes a comprehensive framework for modeling individual distinctions and devising effective tailored AI approaches Tailored for academic scholars and researchers in psychological and brain sciences computer science and related fields this book provides a comprehensive exploration of pioneering advancements in the convergence of artificial and human intelligence Its diverse chapters encompass a wide array of topics including the identification of mental health concerns integration of human intelligence into AI tools enhancement of reliability and exploration of data standards As it fuses expertise from these two disciplines the book paves the way for a new era of personalized interventions with the potential to revolutionize human cognitive enhancement training and overall well being

Introduction to Computing and Algorithms Russell L. Shackelford,1999 Introduction to Computing and Algorithms prepares students for the world of computing by giving them a solid foundation in the study of computer science algorithms By taking an algorithm based approach to the subject this book helps readers grasp overall concepts rather than getting them bogged down with specific syntax details of a programming language that can become obsolete Students work with algorithms from the start and apply these ideas to real problems that computers can help solve The benefit of this approach is that students will understand the power of computers as problem solving tools learn to think like programmers and gain an appreciation of the computer science discipline
