Altered Reaching Following Adaptation To Optical:

Perceptual Modification Robert B. Welch, 2013-10-22 *Perceptual Modification Adapting to Altered Sensory Environments* is about the study of human perception using a particular research strategy the systematic alteration of vision or audition It is assumed that by observing how the sensory apparatus copes with this disturbance it will be possible to formulate valuable hypotheses about the structure and development of normal perception and perceptual motor coordination The specific goals of this book are first to organize the vast and confusing literature on adaptation to perceptual rearrangement and second to assess its contribution to the understanding of normal perception and perceptual learning The book begins with discussions of adaptation to small prism induced displacements of the visual field Separate chapters follow on the proposition that adaptation to prismatic displacement and other forms of rearrangement is actually a form of learning adaptation to inverted and reversed vision optical tilt illusory motions of the visual field size depth distortions and distortions of form Subsequent chapters deal with studies of auditory rearrangement examine individual and interspecies differences in adaptability and the study of adaptation to the visual distortions encountered by the underwater observer The book is written for researchers and graduate students in experimental psychology It will be of value and interest whether the reader is a specialist in the area of perceptual modification or indeed a generalist *Adaptive Spatial Alignment* Gordon M. Redding, Benjamin

Wallace, 2013-06-17 For most people prism adaptation is an amusing demonstration first experienced perhaps in an introductory psychology course This monograph relates this peculiar phenomenon to the larger context of cognitive science especially motor control and learning The first part sketches the background concepts necessary to understand the contribution of prism adaptation to the larger issue of adaptive perceptual motor performance including a review of the basic concepts of motor control and learning that enable strategic response in the prism adaptation situation the development of a hypothesis about spatial representation and spatial mapping and an introduction to the basic idea of adaptive spatial alignment and a contrasting view of perceptual and motor learning and a review of evidence for the involvement of nonassociative and associative learning in prism adaptation Directly concerned with data and theory in prism adaptation the second part presents an outline of prism adaptation methodology and a list of several empirical conclusions from previous research that constrained development of theoretical framework a theory of strategic perceptual motor control and learning which enables adaptive performance during prism exposure but does not directly involve adaptive spatial alignment an extension of the theory to include realignment processes which correct for the spatial misalignment among sensorimotor systems produced by prisms and a demonstration of how traditional issues in prism adaptation may be rephrased in terms of the present theoretical framework The last part of this volume reviews the research conducted in developing and testing the present theory of prism adaptation It summarizes the initial investigations employing a naturalistic exposure setting reports some more rigorous tests with an experimentally constrained research paradigm points out the more general theoretical

issues raised by the authors analysis of prism adaptation and makes specific suggestions for further research within the prism adaptation paradigm Mental Health Program Reports U.S. National Institute of Mental Health.
