Protective Groups in Organic Chemistry J. McOmie, 2012-12-06 During the past decade there has been a great increase in the use of protective groups especially in the synthesis of large and complex organic molecules Perhaps the greatest activity has been in the peptide field where such triumphs as the total synthesis of insulin and of bovine ribonuclease molecular weight 13 700 have been achieved Correspondingly more protective groups have been devised for the protection of amino and imino groups than for any other functional group There are many reviews and books on the synthesis of peptides but there has been no general survey of protective groups since my 1 own review in 1963 At that time the five main methods for the removal of protective groups involved acid or base hydrolysis reduction oxidation or thermal elimination reactions Recent advances include the use of photo sensitive and metal ion sensitive protective groups and the attachment of functional groups to reactive polymers as a method of protection during the solid phase synthesis of peptides and polynucleotides Another interesting development is the design and use of protective groups with a built in safety catch which can be released by a specific chemical reaction so that an otherwise stable bond is made labile at the appropriate moment thereby allowing the protective group to be removed under very mild conditions My own interest in protective groups dates from 1944 when as a student I gave two lectures on the subject and produced an 11 page review including 70 references

Protection of Functional Groups in Peptide Synthesis Erhard Gross, Johannes Meienhofer, 2014-05-10 The Peptides Analysis Synthesis Biology Volume 3 Protection of Functional Groups in Peptide Synthesis focuses on protection of functional groups in peptide synthesis This book consists of seven chapters Chapter 1 reviews the large variety of amine protecting groups The protection of carboxyl groups is described in Chapter 2 while the chemistry of sulfhydryl group protection in peptide synthesis is discussed in Chapter 3 Chapter 4 covers the protection of the hydroxyl groups of serine threonine tyrosine and other hydroxyl containing amino acids Differential protection and selective deprotection in peptide synthesis is deliberated in Chapter 5 In chapter 6 the opportunities and constraints of the tactics of minimal protection of side chain functions during peptide synthesis are reviewed The last chapter is devoted to the interesting aspects of dual function groups This volume is recommended for specialists and researchers concerned with peptide and protein research **Protecting**

Greene's Protective Groups in Organic Synthesis continues to be an indispensable reference for controlling the reactivity of the most common functional groups during a synthetic sequence. This new edition incorporates the significant developments in the field since publication of the third edition in 1998, including new protective groups such as the fluorous family and the uniquely removable 2-methoxybenzenesulfonyl group for the protection of amines. New techniques for the formation and cleavage of existing protective groups with examples to illustrate each new technique. Expanded coverage of the unexpected side reactions that occur with protective groups. New chart covering the selective deprotection of silyl ethers. 3,100 new references from the professional literature. The content is organized around the functional group to be protected and ranges from the simplest to the most complex and highly specialized protective groups.

Complements the text in enhanced ebook editions with tutorial videos where the author provides an introduction to microwave-assisted chemistry.

Comprehensive Organic Functional Group Transformations Alan R. Katritzky, Gordon W. Kirby, Otto Meth-Cohn, Charles Wayne Rees, 2003-03-21 In this Volume containing 24 chapters devoted to carbon attached by single bonds to two heteroatoms, the reader will find several chapters reviewing the synthesis of familiar functional groups, notably acetals, dithioacetals, aminals, and the various mixed species. The derivatives with tetracoordinated saturated carbon are described in Part I and those e.g. ketene acetals of tricoordinated carbon in Part II. However, the treatment is comprehensive and the authors have uncovered much fascinating chemistry concerning less familiar groups including some like geminal halohydrins, haloamines, and diols that are often unstable. Again a surprisingly large number of compounds having two metals attached to the same carbon have been located in the literature and the abundance of phosphorus derivatives e.g. those with geminal nitrogen functions reflects their importance as biologically active species and as intermediates in synthesis. Part III consists of a single short chapter describing dicoordinate carbon carbenes and examples of carbon cations, anions, and radicals. Here the treatment is deliberately selective since throughout the work as a whole emphasis is placed on the synthesis of isolable species rather than the transient intermediates of organic reactions.
