

Installing Protectowire Linear Heat Detector

1. Purpose

The purpose of this guide is to ensure coverage of the area to be protected in accordance with accepted fire protection principles and to assure uniform installations.

Whenever there is a choice between two or more possible procedures, the one which results in increased protection should be followed.

2. Protectowire Linear Heat Detector Selection

The Detector is made in different temperature ratings to allow for variances in normal or ambient temperatures. The Detector may be chosen for specific applications in accordance with the information in the chart shown below.

The description stated for the various models is intended to provide application guidance based upon outer jacket characteristics, and should be used only as a general reference guide.

Consult the factory regarding specific applications. All specifications are subject to change without notice.

3. Outdoor Applications

Exposure to direct sunlight may cause the temperature of the Protectowire Linear Heat Detector or its mounting surface to exceed the maximum ambient limit and/or operating temperature rating of the Detector. Shielding of the Detector may be required in order to reduce the maximum ambient temperature to acceptable limits.

Outdoor messenger wire installations present additional challenges due to environmental factors such as snow loads, ice build-up or wind. Increased detector support must be provided by using additional intermediate fasteners with closer spacing in all outdoor installations. When ordering messenger wire configurations, add suffix "-M" to the Protectowire model number.
