Foster,2016-01-19 Carbon emissions from the retail segment of the food cold chain are relatively high compared to other parts of the food cold chain Studies have also shown that food temperature is less well controlled at the retail and consumer end of the cold chain There is therefore considerable potential to optimize performance of refrigerated display cabinets and the refrigeration systems that are used to operate them to reduce carbon emissions and to improve food temperature control Sustainable Retail Refrigeration draws together world experts on retail refrigeration In a single resource the authors cover the latest technologies and best current knowledge in the field With increasing concerns about energy use and global warming gasses retailers are increasingly being called to account for their actions Sustainable Retail Refrigeration is a valuable reference to manufacturers managers and policy makers incorporating both a design and an operational perspective

Low-GWP Commercial Refrigeration Feasibility and Cost-benefit Engineering Evaluation A. S. (Ed) Cheng, Kyle Larson,2018 Advances in New Heat Transfer Fluids Alina Adriana Minea,2017-03-16 Heat transfer enhancement has seen rapid development and widespread use in both conventional and emerging technologies Improvement of heat transfer fluids requires a balance between experimental and numerical work in nanofluids and new refrigerants Recognizing the uncertainties in development of new heat transfer fluids Advances in New Heat Transfer Fluids From Numerical to Experimental Techniques contains both theoretical and practical coverage **Practical Guide to Energy Management for Facilities Engineers and Managers** Thomas E. Mull,2001 This guide examines practical applications and presents examples for conserving energy and reducing energy costs in commercial institutional and industrial plants and facilities Registered Mechanical Engineer Mull provides an introduction to the basic scientific principles and economics of energy management Then commonly used energy consuming equipment and systems are profiled Some of the topics covered include steam and hydronic boilers and pumping chilled water air distribution HVAC electrical lighting compressed air refrigeration heat recovery cogeneration energy management and thermal storage systems c Book News Inc **Design of Heat Exchangers for Heat Pump Applications** Marco Fossa,Antonella Priarone,2020-12-28 Heat pumps HPs allow for providing heat without direct combustion in both civil and industrial applications They are very efficient systems that by exploiting electrical energy greatly reduce local environmental pollution and CO2 global emissions The fact that electricity is a partially renewable resource and because the coefficient of performance COP can be as high as four or more means that HPs can be nearly carbon neutral for a full sustainable future The proper selection of the heat source and the correct design of the heat exchangers is crucial for attaining high HP efficiencies Heat exchangers also in terms of HP control strategies are hence one of the main elements of HPs and improving their performance enhances the effectiveness of the whole system Both the heat transfer and pressure drop have to be taken into account for the correct sizing especially in the case of mini and micro geometries for which traditional models and correlations can not be applied New models and measurements are required for best HPs system design including optimization strategies for energy exploitation temperature control and mechanical
