HANDS-FREE TECHNIQUES IN SMALL ANIMAL RADIOGRAPHY

Hands-free techniques allow veterinary workers to increase their distance from the x-ray source and reduce their exposure to ionizing radiation. Proper positioning tools (i.e. soft, elastic and flexible) are essential to allow for patient comfort - to learn more visit handsfreexrays.com. Patient comfort and safety must be considered and assessed before using hands-free techniques.

Lateral Thorax Small chest sandbags provide controlled pressure points on the patient. Elastic extremity straps connect to x-ray table or to mouth. Small sandbags can be used for extremity manipulation. Positioning foam wedges can be used to keep dogs chest/cervical/pelvic straight. 	Ventrodorsal Thorax Only extend extremities to patient's comfort level. Feet wedges can be used to keep head straight (see Yellow Thorax V/D). Flare V/D Bragles - to ensure patient comfort always use foam material. 	Ventrodorsal Abdomen Flare V/D Bragles - to ensure patient comfort always use foam material. Only extend extremities to patient's comfort level. 	Lateral Abdomen Small sandbags can also be used for extremity manipulation. Elastic extremity straps - Only extend extremities to patient's comfort level. Half chest sandbags - controlled pressure points on the patient. 
Lateral Thorax Plastic cut paddles (sawdust) can be helpful for positioning some cats. Paddles should be covered with paper for use. Will not work for all cats. Limit use above +300 pounds.  Only extend extremities to patient's comfort level.	Ventrodorsal Thorax Only extend extremities to patient's comfort level. Feet wedges can be useful in handling brachycephalic dogs. Flare V/D Bragles - to ensure patient comfort always use soft material. 	Ventrodorsal Abdomen Flare V/D Bragles - to ensure patient comfort always use soft material. Only extend extremities to patient's comfort level. 	Lateral Abdomen Only extend extremities to patient's comfort level. Plastic board (or blue) placed on x-ray table, securing extremities for "feet bracing". Place small thick towels. Wedges (or yellow) used to prevent elbows from collapsing. 

Sedation is sometimes recommended for orthopedic views to allow for well positioned radiographs while providing analgesia for the patient.

Lateral Hock Put limb forward and extend strap to table. Allow hock to fall down to the table. Flare wedge under hip will change angle of hock (when needed). 	Lateral Shoulder A sandbag can be used to move soft tissue out of the shoulder region. Straps connect to table. 	Lateral Elbow To move head out of view use a sandbag or foam wedge. Straps connect to table. 
Cranio-caudal Hock Flare wedge under hock keeps patient comfortable and assists with positioning. 	Cranio-caudal Shoulder To keep head out of view use a foam or a brachycephalic dog is forward/cranio-caudal under head. Flare wedge under elbow keeps patient comfortable and helps with positioning. Sandbag over top of extremity keeps it straight and close to table. 	Ventrodorsal Pelvis To stabilize rear legs to center under abdominal flange. If used straighten, simply adjust the legs. Flare wedge under pelvis keeps patient comfortable and assists with positioning. Straps connect to edge of table.
