## **Understanding Building Stones and Stone Buildings**

John Hudson, John Cosgrove, 2019-04-24 This book covers the wide spectrum of subjects relating to obtaining and using building stones starting with their geological origin and then describing the nature of granites volcanics limestones sandstones flint metamorphic stones breccias and conglomerates with emphasis being placed on how to recognise the different stones via the many illustrated examples from Great Britain and other countries The life of a building stone is explained from its origin in the quarry through its exposure to the elements when used for a building to its eventual

deterioration The structure of stone buildings is then discussed with explanations of the mechanics of pillars lighthouses and walls arches bridges buttresses and roof vaults plus castles and cathedrals The sequence of the historical architectural styles of stone buildings is explained from the early days through to postmodern buildings Special attention is paid to two famous architects the Roman Vitruvius and the English Sir Christopher Wren who designed and supervised the construction of St Paul s Cathedral in London To demonstrate many of the concepts presented two exemplary stone buildings are described in detail the Albert Memorial in London and Durham Cathedral in northern England The former building is interesting because it is comprised of a cornucopia of different building stones and the latter building because of its architecture and sandstone decay mechanisms In the final Chapter ruined stone buildings are discussed the many reasons for their decay and the possibility of their rebirth via digital recording of their geometry The book has over 350 pages and is illustrated with more than 450 diagrams and colour photographs of both the various stones and the associated stone buildings Readers knowledge of the subject will be greatly enhanced by these images and the related explanatory text A wide ranging references and bibliography section is also included

**Houses with a Story** Seiji Yoshida,2023-11-14 For fans of Studio Ghibli artist Seiji Yoshida s fantastical art book is a perfect gift that transports readers to imaginary houses each with their own story to tell A dreamer s tree house A mechanic s cottage A submerged city In Houses with a Story more than 30 imaginative houses and the people who make them home offer unexpected worlds to wander through and explore Who is the mischievous bridge tower keeper What does the witch grow in her garden How does the postal worker tame his delivery dragons In each house readers discover the contents of rooms and closets what s at the top of the stairs and where shadowy hallways lead Story text provides background and details about the lives of the residents and hints about their past and future Featuring lush full color illustrations including diagrams elevations and sectional drawings along with detailed descriptions of each character and their pets the homes architecture design location and landscapes open doors to whimsy wonder and endless possibilities Business Ethics and Digitization Christoph Lütge,Matthias Uhl,Alexander Kriebitz,Raphael Max,2022-08-05 In this collection we bring together various disciplines that are critically engaged in reflecting the diverse aspects of digitization in business politics ethics and

education Accordingly the volume will provide a provocative discourse space where the key theoretical and practical problems of implementing ethics in digitization will be discussed and assessed Moreover we aim to create a bridge between two hitherto mostly separate discourses the ethical discourse of issues of digitization and the discourse on ethical standards and their implementation in the area of business These discourses are greatly in need of being joined together since the vast majority of ethical standards in the field of digitization will have to be implemented by companies not government agencies NGOs or other non profit organisations We believe that this particular selection of articles is a first step towards creating this bridge

**Learning to Read and Write** Margaret Harris, Giyoo Hatano, 1999-05-27 For many years the development of theories about the way children learn to read and write was dominated by studies of English speaking populations As we have learned more about the way that children learn to read and write other scripts whether they have less regularity in their grapheme phoneme correspondences or do not make use of alphabetic symbols at all it has become clear that many of the difficulties that confront children learning to read and write English specifically are less evident or even non existent in other populations At the same time some aspects of learning to read and write are very similar across scripts The unique cross linguistic perspective offered in this book including chapters on Japanese Greek and the Scandinavian languages as well as English shows how the processes of learning to read and spell are affected by the characteristics of the writing system that children are learning to master

*Issues in Reading, Writing and Speaking* A. Caramazza, 2012-12-06 *Visioning Technologies* Graham Cairns, 2016-12-08 Visioning

Technologies brings together a collection of texts from leading theorists to examine how architecture has been and is reframed and restructured by the visual and theoretical frameworks introduced by different technologies of sight understood to include orthographic projection perspective drawing telescopic devices photography film and computer visualization amongst others Each chapter deals with its own area and historical period of expertise organized sequentially to mark out and analyse the historical evolution of how architecture has been transformed by technologically induced shifts in human perception from the 15th century until today This book underlines the way in which architectural forms and design processes have developed historically in conjunction with the systems of sight we manufacture technologically and suggests this continues today Paradoxically it is premised on the argument that these technological systems tend in their initial formulations to obtain ever greater realism in our visualizations of the physical world
