## CHAPTER 13 DNA Fingerprinting

**“Genetic Prints Help Solve Mystery of Girls Switched at Birth.” “Murder Conviction Overturned by DNA Testing: Prisoner Released.”** Headlines such as these have become commonplace in recent years due to the forensic method of DNA fingerprinting, originally developed in Britain in the early 1980s. DNA fingerprinting is a method for visualizing sequences of DNA. Every person (except identical twins) has a unique sequence of base pairs. In DNA fingerprinting, scientists analyze a small number of DNA sequences that are known to vary a great deal among individuals. DNA fingerprinting has become an important tool in investigating criminal cases, identifying bodily remains, tracing heritage, and studying genetic disorders. In this activity, you will investigate the technique of DNA fingerprinting and learn how this science of identity is used to solve problems of family heritage and criminal justice.

### Part A: How to Make a DNA Fingerprint

**Step 1:** DNA is extracted from cells and cut into fragments by restriction enzymes.

**Step 2:** The DNA fragments are placed on an electrophoresis gel, and electric current is applied. DNA, being negatively charged, moves through the gel to the positively charged electrode. The fragments spread out according to size.

**Step 3:** DNA fragments are separated by chemicals into single strands. Because the strands will disintegrate after a day or two, they are transferred from the gel onto a sheet of nylon. DNA probes, which are synthetic DNA segments with known sequences, are labeled with radioactive compounds. The probes are then applied to the nylon, and complementary sequences on the DNA fragments being tested attach to the probes by base pairing.

**Step 4:** The nylon sheet is exposed to X-ray film, and dark bands appear wherever the fragment DNA (from the sample) has attached to the probe.

### Analyze and Conclude

*Respond to each question.*

- 1. Identify** In Set 2 of the DNA fingerprints, do any of the bands in the alleged father's DNA fingerprint match a band in the child's DNA fingerprint?
- 2. Theorize** What does this result indicate?

Set 1: Paternity Exclusion

Set 2: Paternity Inclusion

Figure 1

The DNA fingerprints in Figure 1 can be used to determine the paternity of a child. In Set 1 of the DNA fingerprints, one of the bands in the child's DNA fingerprint is also present in the mother's DNA fingerprint. Because none of the bands in the alleged father's DNA fingerprint matches the child's bands, he cannot be the father.

Resources in Education , 1984 *Designing and Implementing Interdisciplinary Education* Zehui Zhan, Siyuan Lyu, Shijing Niu, Kai Tu, Qingna Lai, 2025-02-11 Interdisciplinary education is the future trend in global K 12 curriculum reform and all K 12 subject teachers should be prepared to meet the challenges it presents This book aims to explore the competence structure that K 12 teachers need to effectively design and implement interdisciplinary education from a general perspective of subject integration Drawing on relevant theories from interdisciplinary education and teacher competence research the book clarifies the fundamental connotations of teachers interdisciplinary teaching competence and identifies the key elements of this competence from an international perspective It also examines the transformation pathways for teachers from subject specific teaching to interdisciplinary teaching based on China s national curriculum framework On this basis the book constructs a framework for K 12 teachers interdisciplinary teaching competence and applies it to the cultivation of interdisciplinary teaching staff guiding the design of assessment tools improvement strategies and training programs for enhancing interdisciplinary teaching competence The book will encourage teachers from different disciplines to participate in the design and implementation of interdisciplinary teaching thereby

promoting the sustainable development of interdisciplinary education Global educators and researchers interested in interdisciplinary education competence framework development teacher professional development and Chinese education will find valuable insights in this book

**Ecological Mechanics** Mark Denny, 2015-12-29 An in depth exploration of how biomechanics and ecology work together Plants and animals interact with each other and their surroundings and these interactions with all their complexity and contingency control where species can survive and reproduce In this comprehensive and groundbreaking introduction to the emerging field of ecological mechanics Mark Denny explains how the principles of physics and engineering can be used to understand the intricacies of these remarkable relationships Denny opens with a brief review of basic physics before introducing the fundamentals of diffusion fluid mechanics solid mechanics and heat transfer taking care to explain each in the context of living organisms Why are corals of different shapes on different parts of a reef How can geckos climb sheer walls Why can birds and fish migrate farther than mammals How do desert plants stay cool The answers to these and a host of similar questions illustrate the principles of heat mass and momentum transport and set the stage for the book's central topic the application of these principles in ecology Denny shows how variations in the environment in both space and time affect the performance of plants and animals He introduces spectral analysis a mathematical tool for quantifying the patterns in which environments vary and uses it to analyze such subjects as the spread of invasive species Synthesizing the book's materials the final chapters use ecological mechanics to predict the occurrence and consequences of extreme ecological events explain the emergence of patterns in the distribution and abundance of organisms and empower readers to explore further Ecological Mechanics offers new insights into the physical workings of organisms and their environment

*Gene Manipulation in Plant Improvement II* J. Perry Gustafson, 1990-12-31 There are clearly many directions in which the further development of the GUS gene fusion system can progress Some of these have been outlined above but others can be imagined There are no reasons to limit our conceptions of the use of GUS gene fusions to analysis and manipulation of single genes We can envision numerous marked genes perhaps with several new fusion systems giving valuable information about gene interaction or population structure The study of plant pathogen and plant symbiont interactions can progress rapidly with simple quantitative markers for genes and individuals We can imagine ways of using gene fusions to report on crop physiology or other complex phenotypes thereby enhancing the accuracy and speed of screening Introduction of the biosynthetic pathway for glucuronide detoxification by expressing genes for the UDP glucuronyl transferases in plants may result in novel mechanisms for plants to deal with xenobiotics such as insecticides or herbicides Synthesis of substrates which until now has been performed chemically resulting in expensive compounds can be done biosynthetically This should make the system not only the most powerful gene fusion system for agriculture but also the most accessible
