N. Prabhakar Murthy,2008-04-15 Modern societies depend on the smooth operation of many complex systems designed and built by humans that provide a variety of outputs products and services These include transport systems trains buses ferries ships and ae planes communication systems television telephone and computer networks utilities water gas and electricity networks manufacturing plants to produce dustrial products and consumer durables processing plants to extract and process minerals and oil hospitals to provide services and

banks for financial transactions to name a few Every system built by humans is unreliable in the sense that it degrades with age and or usage A system is said to fail when it is no longer capable of delivering the designed outputs Some failures can be catastrophic in the sense that they can result in serious economic losses affect humans and do serious damage to the environment Typical examples include the crash of an aircraft in flight failure of a sewerage processing plant and collapse of a bridge The degradation can be controlled and the likelihood of catastrophic failures reduced through maintenance actions including preventive maintenance inspection condition monitoring and design out maintenance Corrective maintenance actions are needed to restore a failed system to operational state through repair or replacement of the components that caused the failure Maintenance has moved from being an engineering activity after a system has been put into operation into an important issue that needs to be addressed during the design and manufacturing or building of the system

Risk Management and Error Reduction in Aviation Maintenance Manoj S. Patankar,James C. Taylor,2017-03-02 Although several U S and European airlines have started providing human factors training to their maintenance personnel the academic community some 300 academic programs in the United States and several others in Europe and Asia has not yet started offering formal human factors education to maintenance students The highly respected authors strongly believe in incorporating the human factors principles in aviation maintenance This is the first of two volumes providing effective behavioural guidance on risk management in aviation maintenance for both the novice and the experienced maintenance personnel Its practical guidelines assist both student and practising aviation maintenance personnel to develop sustainable safety culture For the maintenance community it provides some theoretical discussion about the Why for risk management and then focus on the How to implement a successful error reduction program To help the maintenance community in making a strong case to their financial managers the authors also discuss

the return on investment for risk management programs The issue of risk management is taken at two levels First it provides a basic awareness information to those who have little or no knowledge of maintenance human factors Second it provides a set of practical tools for the more experienced people so that they can be more effective in risk management and error recovery in their jobs This invaluable book serves as a practical guide as well as an academic textbook The book covers fundamental human factors principles from a risk management perspective Upon reading this informative book the audience will be able to apply the basic principles of risk management to aviation maintenance environment and they will be able to use low risk behaviours in their daily work
