environmental context David Bennett,2006 **Powerful Finance and Innovation Trends in a High-Risk Economy**

Blandine Laperche, Dimitri Uzunidis, 2008-02-27 In the 1970s the large size of enterprises was one of the symbols of the mass production system's rigidity. The second symbol was state interventionism blamed for the economic difficulties of the period: growing unemployment and upsurge of inflation. Globalisation is characterised by the predominance of deregulated finance: big finance over economic activities. Between free enterprise capitalism and monopoly capitalism stands finance-based capitalism. The financial sphere is mobilised to promote variety and reinforce selection. This book presents in its first part the financial determinants of innovation processes considered in a macro-economic perspective which are limited by short-term constraints and studies in its second part the linkages existing between the necessity to innovate in order to survive and the constant attention given to financial results.

From Knowledge Management to Strategic Competence Joseph Tidd, 2006 Attempts to establish the links between strategic competencies, knowledge management, organisational learning and innovation, specifically how an organisation identifies, assesses and exploits its competencies and translates these into new processes, products and services.

The Crisis of Innovation in Water and Wastewater Duncan A. Thomas, Roger R. Ford, 2005 This significant new book highlights a little acknowledged but potentially catastrophic crisis of innovation in the global water sector which institutions and industries are frighteningly ill-equipped to tackle or even accept. It suggests potential new technology and policy approaches to overcome both current and future problems. The book explores how technological innovation is vital to help provide sustainable water in both the UK and developing countries. However, innovation is being overlooked in the face of global trends to privatize and regulate water utilities. The authors highlight how the global water sector is failing to respond to increasingly complex world needs and continues to build largely unsustainable centralized infrastructures opposing more appropriate distributed and local modern technologies. The book also includes suggestions for potentially innovative technology and policy solutions to meet escalating global water and wastewater demands. Importantly, the authors adopt a long-term perspective that crosses both disciplinary and institutional boundaries and include an international comparative perspective covering a diverse range of examples and countries. This comprehensive book will have a broad appeal amongst researchers and academics with an interest in technology, management, innovation studies, geography and development studies. It will also be a valuable asset for water regulators and governmental and non-governmental organisations working in this field.

The Strategic Management of Technological Innovation Ray Loveridge, Martyn Pitt, 1990-12-21 An exploration of the emerging discourse between the designers of new products and processes and those whose control over strategic resources is helping to shape the creation of new markets and organizational forms.

Strategic Management of Technology and Innovation Robert A. Burgelman, Modesto A. Maidique, Steven C. Wheelwright, 1996 A combination of text and cases on technology and innovation which includes a new section on new products and business and a number of new cases.
