Design, Implementation and Evaluation of Hardware Vision Systems Dedicated to Real-Time Face Recognition Ginhac Dominique,Paindavoine Michel,Yang Fan,2007 In this chapter we have presented three dedicated systems to face recognition developed by our research team since 2002 Our main objective was motivated by the implementation on embedded systems of efficient models of unconstrained face tracking and identity verification in arbitrary scenes The main goal of these various

systems is to provide efficient algorithms that only require few hardware in order to obtain high success rates of face recognition with high real time constraints The first system is a real time vision system that allows us to localize faces in video sequences and verify their identity These processes are image processing techniques and *Unconstrained Face Recognition* Shaohua Kevin Zhou,Rama Chellappa,Wenyi Zhao,2006-10-11 Face recognition has been actively studied over the past decade and continues to be a big research challenge Just recently researchers have begun to investigate face recognition under unconstrained conditions *Unconstrained Face Recognition* provides a comprehensive review of this biometric especially face recognition from video assembling a collection of novel approaches that are able to recognize human faces under various unconstrained situations The underlying basis of these approaches is that unlike conventional face recognition algorithms they exploit the inherent characteristics of the unconstrained situation and thus improve the recognition performance when compared with conventional algorithms *Unconstrained Face Recognition* is structured to meet the needs of a professional audience of researchers and practitioners in industry This volume is also suitable for advanced level students in computer science **Face Detection and Recognition** Asit Kumar Datta,Madhura Datta,Pradipta Kumar Banerjee,2015-10-28 Face detection and recognition are the nonintrusive biometrics of choice in many security applications Examples of their use include border control driver s license issuance law enforcement investigations and physical access control *Face Detection and Recognition Theory and Practice* elaborates on and explains the theory and practice of face de
