Time Series: Theory and Methods Peter J. Brockwell, Richard A. Davis, 1991-02-22 Here is a systematic account of linear time series models and their application to the modeling and prediction of data collected sequentially in time. It details techniques for handling data and offers a thorough understanding of their mathematical basis.

Introduction to Time Series Analysis Mark Pickup, 2014-10-15 Introducing time series methods and their application in social science research, this practical guide to time series models is the first in the field written for a non-econometrics audience. Giving readers the tools they need to apply models to their own research, *Introduction to Time Series Analysis* by Mark Pickup demonstrates the use of and the assumptions underlying common models of time series data, including finite distributed lag, autoregressive distributed lag, moving average, differenced data, and GARCH, ARMA, ARIMA, and error correction models. This volume does an excellent job of introducing modern time series analysis to social scientists who are already familiar with basic statistics and the general linear model.

William G. Jacoby, Michigan State University

Time Series Analysis for the Social Sciences Janet M. Box-Steffensmeier, John R. Freeman, Matthew P. Hitt, Jon C. W. Pevehouse, 2014-12-22 Time series or longitudinal data are ubiquitous in the social sciences. Unfortunately, analysts often treat the time series properties of their data as a nuisance rather than a substantively meaningful dynamic process to be modeled and interpreted. *Time Series Analysis for the Social Sciences* provides accessible, up-to-date instruction and examples of the core methods in time series econometrics.

Janet M. Box, Steffensmeier, John R. Freeman, Jon C. Pevehouse, and Matthew P. Hitt cover a wide range of topics, including ARIMA models, time series regression, unit root diagnosis, vector autoregressive models, error correction models, intervention models, fractional integration, ARCH models, structural breaks, and forecasting. This book is aimed at researchers and graduate students who have taken at least one course in multivariate regression. Examples are drawn from several areas of social science, including political behavior, elections, international conflict, criminology, and comparative political economy.

Time Series David R. Brillinger, 2001-09-01 This text employs basic techniques of univariate and multivariate statistics for the analysis of time series and signals

Time-Series Analysis John M. Gottman, 2009-03-19 Since the 1970s social scientists and scientists in a variety of fields psychology sociology education psychiatry economics and engineering have been interested in problems that require the statistical analysis of data over time and there has been in effect a conceptual revolution in ways of thinking about pattern and regularity This book is a comprehensive introduction to all the major time series techniques both time

domain and frequency domain It includes work on linear models that simplify the solution of univariate and multivariate problems The author begins with a non mathematical overview throughout he provides easy to understand fully worked examples drawn from real studies in psychology and sociology Other less comprehensive books on time series analysis require calculus this presupposes only a standard introductory statistics course covering analysis of variance and regression The chapters are short designed to build concepts and the reader's confidence one step at a time Many illustrations aid visual intuitive understanding Without compromising mathematical rigour the author keeps in mind the reader who does not have an easy time with mathematics the result is a readily accessible and practical text

Introduction to Time Series and Forecasting Peter J. Brockwell, Richard A. Davis, 2013-03-14 Some of the key mathematical results are stated without proof in order to make the underlying theory accessible to a wider audience The book assumes a knowledge only of basic calculus matrix algebra and elementary statistics The emphasis is on methods and the analysis of data sets The logic and tools of model building for stationary and non stationary time series are developed in detail and numerous exercises many of which make use of the included computer package provide the reader with ample opportunity to develop skills in this area The core of the book covers stationary processes ARMA and ARIMA processes multivariate time series and state space models with an optional chapter on spectral analysis Additional topics include harmonic regression the Burg and Hannan Rissanen algorithms unit roots regression with ARMA errors structural models the EM algorithm generalized state space models with applications to time series of count data exponential smoothing the Holt Winters and ARAR forecasting algorithms transfer function models and intervention analysis Brief introductions are also given to cointegration and to non linear continuous time and long memory models The time series package included in the back of the book is a slightly modified version of the package ITSM published separately as ITSM for Windows by Springer Verlag 1994 It does not handle such large data sets as ITSM for Windows but like the latter runs on IBM PC compatible computers under either DOS or Windows version 3.1 or later The programs are all menu driven so that the reader can immediately apply the techniques in the book to time series data with a minimal investment of time in the computational and algorithmic aspects of the analysis

Time Series Analysis: Forecasting & Control, 3/E, 1994-09 This is a complete revision of a classic seminal and authoritative text that has been the model for most books on the topic written since 1970 It explores the building of stochastic statistical models for time series and their use in important areas of application forecasting model specification estimation and checking transfer function modeling of dynamic relationships modeling the effects of intervention events and process control
