Hands On Lab Guide Vmware:

Building Virtual Machine Labs Tony V. Robinson, 2017-06 Virtualization is a skill that most IT or security pros take for granted. The sheer number of choices and requirements can be a daunting challenge to face for beginners and veterans alike. With this book you will learn how to build a robust customizable virtual environment suitable for both a personal home lab as well as a dedicated office training environment. You will learn how to understand the mechanics of virtualization and how they influence the design of your lab. Build an extensive baseline lab environment on any one of five commonly used hypervisors: VMware vSphere Hypervisor, VMware Fusion, VMware Workstation, Oracle VirtualBox, and Microsoft Hyper-V. Harden your lab environment against VM escapes and other security threats. Configure the pfSense firewall distribution to provide security segmentation and network services to your virtual lab. Deploy either Snort or Suricata open source IDS platforms in IPS mode to further enhance the flexibility, segmentation, and security of your lab network. Deploy Splunk as a log management solution for your lab. Reconfigure the provided baseline lab environment to better suit your individual needs. Easy-to-follow steps and illustrations provide detailed comprehensive guidance as you build your custom tailored lab. Both IT and security professionals need practice environments to better hone their craft. Innovative Practices in Teaching Information Sciences and Technology John M. Carroll,2014-01-27 University teaching and learning has never been more innovative than it is now This has been enabled by

a better contemporary understanding of teaching and learning. Instructors now present situated projects and practices to their students, not just foundational principles. Lectures and structured practice are now often replaced by engaging and constructivist learning activities that leverage what students know about, think about, and care about. Teaching innovation has also been enabled by online learning, in the classroom, beyond the classroom, and beyond the campus. Learning online is perhaps not the panacea sometimes asserted, but it is a disruptively rich and expanding set of tools and techniques that can facilitate engaging and constructivist learning activities. It is becoming the new normal in university teaching and learning. The opportunity and the need for innovation in teaching and learning are together keenest in information technology itself. Computer and Information Science faculty and students are immersed in innovation. The subject matter of these disciplines changes from one year to the next; courses and curricula are in constant flux. And indeed, each wave of disciplinary innovation is assimilated into technology tools and infrastructures for teaching new and emerging concepts and techniques. Innovative Practices in Teaching Information Sciences and Technology: Experience, Reports, and Reflections describes a set of innovative teaching practices from the faculty of Information Sciences and Technology at Pennsylvania State University. Each chapter is a personal essay describing practices implemented by one or two faculty that challenge assumptions and push beyond standard practice at the individual faculty and classroom level. These are innovations that instructors elsewhere may find directly accessible and adaptable. Taken as a set, this book is a case study of teaching innovation as a part of faculty culture. Innovation is not optional in information technology; it inheres in both the disciplinary subject matter and in teaching. But it is an option for instructors to collectively embrace innovation as a faculty. The chapters in this book, taken together, embody this option and provide a partial model to faculties for reflecting on and refining their own collective culture of teaching innovation.
