Thermal Management of Electronic Systems C.J. Hoogendoorn, R.A.W.M. Henkes, C.J.M. Lasance, 2012-12-06 The Eurotherm Committee has chosen Thermal Management of Electronic Systems as the subject of its 29th Seminar at Delft University of Technology the Netherlands 14 16 June 1993 This volume constitutes the proceedings of the Seminar Thermal Management is but one of the several critical topics in the design of electronic systems However as a result of the combined effects of increasing heat fluxes miniaturisation and the striving for zero defects preferably in less time and at a lower cost than before thermal management has become an increasingly tough challenge Therefore it is being increasingly recognised that cooling requirements could eventually hamper the technical progress in miniaturisation It might be argued that we are on the verge of a revolution in thermal management techniques Previously a packaging engineer had no way of predicting the temperatures of critical electronic parts with the required accuracy He or she had to rely on full scale experiments doubtful design rules or worst case estimates This situation is going to be changed in the foreseeable future User friendly software tools the acquisition and integrity of input and output data the badly needed training measures the introduction into a concurrent engineering environment all these items will exert a heavy toll on the flexibility of the electronics industries Fortunately this situation is being realised at the appropriate management levels and the interest in this seminar and the pre conference tutorials testifies to this assertion **Heat Transfer & Fluid Flow Digest** ,1983 Chemical Engineering Education ,1990 **Books in Series, 1876-1949** R.R.
