We should start with the fact that now on the market there are three of the largest companies developing software. This is Microsoft and its Windows, Apple and its Mac OS, and Linux. Linux distributions the most popular is Ubuntu. Note that the first two systems are paid software and their price starts from a few hundred dollars. Unlike Windows and Mac OS, Linux distributions are completely free. In addition to pricing, Linux also benefits from system security and stability. Downloading from the Internet or ordering a free disk with the Ubuntu distribution, you will receive a fully fledged operating system. You will not need to download additional software; all the basic applications required for the average user are already included in the Ubuntu package. All this said and done, what comes into the spotlight is the job profile of a Linux system administrator. What is Linux and Why Choose Linux? The Basic Components of Linux, Linux Applications, The Linux Desktop, Basic Administration and Security, Using the Shell, Working with Links, Discerning Commands, Linux Text Editors, The I/O Redirection, File Manipulations, And more.
