7. After the patient's right auditory canal was examined, an abscess was noted. This required drainage. An incision was made over the location of this external abscess. The abscess was drained, with a thick yellowish material seen. Antibiotic ointment and dressing were applied.

8. The patient underwent bilateral myringotomy, including aspiration and eustachian tube inflation, under local anesthesia.

9. Patient underwent removal of tumor, left temporal bone, which required vertical incision anterior to left auricle, extending it superiorly to expose temporalis muscle. The muscle was divided and craniotomy performed to expose the dura over temporal lobe of brain. After elevating the dura, the tumor was isolated and excised. Bone plug was returned to skull, incision was sutured, and dressing was applied.

10. The patient presented seven months postmastoidectomy for simple debridement of the left cavity. This was done under direct visualization using suction. Skin and debris were removed from the left side of the mastoid. No infection was observed. The skin and debris removed appeared normal in appearance.
