Mathematical Tools For Data Mining Set Theory Partial Orders Combinatorics Advanced Information And Knowledge Processing:

Mathematical Tools for Data Mining Dan A. Simovici, Chabane Djeraba, 2014-03-27 Data mining essentially relies on several mathematical disciplines many of which are presented in this second edition of this book Topics include partially ordered sets combinatorics general topology metric spaces linear spaces graph theory To motivate the reader a significant number of applications of these mathematical tools are included ranging from association rules clustering algorithms classification data constraints logical data analysis etc The book is intended as a reference for researchers and graduate students The current edition is a significant expansion of the first edition We strived to make the book self contained and only a general knowledge of mathematics is required More than 700 exercises are included and they form an integral part of the material Many exercises are in reality supplemental material and their solutions are included *Mathematical Tools for Data Mining* Dan A. Simovici, Chaabane Djeraba, 2008-08-15 This volume was born from the experience of the authors as researchers and educators which suggests that many students of data mining are handicapped in their research by the lack of a formal systematic education in its mathematics The data mining literature contains many excellent titles that address the needs of users with a variety of interests ranging from decision making to pattern investigation in biological data However these books do not deal with the mathematical tools that are currently needed by data mining researchers and doctoral students We felt it timely to produce a book that integrates the mathematics of data mining with its applications We emphasize that this book is about mathematical tools for data mining and not about data mining itself despite this a substantial amount of applications of mathematical concepts in data mining are presented The book is intended as a reference for the working data miner In our opinion three areas of mathematics are vital for data mining set theory including partially ordered sets and combinatorics linear algebra with its many applications in principal component analysis and neural networks and probability theory which plays a foundational role in statistics machine learning and data mining This volume is dedicated to the study of set theoretical foundations of data mining Two further volumes are contemplated that will cover linear algebra and probability theory The first part of this book dedicated to set theory begins with a study of functions and relations Application of these fundamental concepts to such issues as equivalences and partitions are discussed Also we prepare the ground for the following volumes by discussing indicator functions fields and other concepts **14th International Conference on Soft Computing Models in Industrial and Environmental Applications (SOCO 2019)** Francisco Martínez Álvarez, Alicia Troncoso Lora, José António Sáez Muñoz, Héctor Quintián, Emilio Corchado, 2019-04-30 This book includes 57 papers presented at the SOCO 2019 conference held in the historic city of Seville Spain in May 2019 Soft computing represents a set of computational techniques in machine learning computer science and various engineering disciplines which investigate simulate and analyze very complex issues and phenomena The selection of papers was

extremely rigorous in order to maintain the high quality of the conference which featured a number of special sessions including sessions on Soft Computing Methods in Manufacturing and Management Systems Soft Computing Applications in the Field of Industrial and Environmental Enterprises Optimization Modeling and Control by Soft Computing Techniques and Soft Computing in Aerospace Mechanical and Civil Engineering New methods and Industrial Applications Intelligent Information and Database Systems Ngoc-Thanh Nguyen, Boonwat Attachoo, Bogdan Trawinski, Kulwadee Somboonviwat, 2014-02-28 The two volume set LNAI 8397 and LNAI 8398 constitutes the refereed proceedings of the 6th Asian Conference on Intelligent Information and Database Systems ACIIDS 2014 held in Bangkok Thailand in April 2014 The 125 revised papers presented were carefully reviewed and selected from 300 submissions The papers address the following topics natural language and text processing intelligent information retrieval semantic Web social networks and recommendation systems intelligent database systems decision support systems computer vision techniques and machine learning and data mining The papers are organized in topical sections on multiple model approach to machine learning MMAML 2014 computational intelligence CI 2014 engineering knowledge and semantic systems IWEKSS 2014 innovations in intelligent computation and applications IICA 2014 modeling and optimization techniques in information systems database systems and industrial systems MOT 2014 innovation via collective intelligences and globalization in business management ICIGBM 2014 intelligent supply chains ISC 2014 and human motion acquisition processing analysis synthesis and visualization for massive datasets HMMD 2014 Deutsche Nationalbibliografie Die deutsche Nationalbibliothek, 2008

Optimization Based Data Mining: Theory and Applications Yong Shi, Yingjie Tian, Gang Kou, Yi Peng, Jianping Li, 2011-05-16 Optimization techniques have been widely adopted to implement various data mining algorithms In addition to well known Support Vector Machines SVMs which are based on quadratic programming different versions of Multiple Criteria Programming MCP have been extensively used in data separations Since optimization based data mining methods differ from statistics decision tree induction and neural networks their theoretical inspiration has attracted many researchers who are interested in algorithm development of data mining Optimization based Data Mining Theory and Applications mainly focuses on MCP and SVM especially their recent theoretical progress and real life applications in various fields These include finance web services bio informatics and petroleum engineering which has triggered the interest of practitioners who look for new methods to improve the results of data mining for knowledge discovery Most of the material in this book is directly from the research and application activities that the authors research group has conducted over the last ten years Aimed at practitioners and graduates who have a fundamental knowledge in data mining it demonstrates the basic concepts and foundations on how to use optimization techniques to deal with data mining problems **Models of Computation for Big Data** Rajendra Akerkar, 2018-12-04 The big data tsunami changes the perspective of industrial and academic research in how they address both foundational questions and practical applications This calls for a paradigm shift in algorithms and the

underlying mathematical techniques There is a need to understand foundational strengths and address the state of the art challenges in big data that could lead to practical impact The main goal of this book is to introduce algorithmic techniques for dealing with big data sets Traditional algorithms work successfully when the input data fits well within memory In many recent application situations however the size of the input data is too large to fit within memory Models of Computation for Big Data covers mathematical models for developing such algorithms which has its roots in the study of big data that occur often in various applications Most techniques discussed come from research in the last decade The book will be structured as a sequence of algorithmic ideas theoretical underpinning and practical use of that algorithmic idea Intended for both graduate students and advanced undergraduate students there are no formal prerequisites but the reader should be familiar with the fundamentals of algorithm design and analysis discrete mathematics probability and have general mathematical maturity

Mathematical Methods for Knowledge Discovery and Data Mining Felici, Giovanni, Vercellis, Carlo, 2007-10-31 This book focuses on the mathematical models and methods that support most data mining applications and solution techniques covering such topics as association rules Bayesian methods data visualization kernel methods neural networks text speech and image recognition an invaluable resource for scholars and practitioners in the fields of biomedicine engineering finance manufacturing marketing performance measurement and telecommunications Provided by publisher

Data Mining and Mathematical Programming Panos M. Pardalos, Pierre Hansen, 2008-04-09 Data mining aims at finding interesting useful or profitable information in very large databases The enormous increase in the size of available scientific and commercial databases data avalanche as well as the continuing and exponential growth in performance of present day computers make data mining a very active field In many cases the burgeoning volume of data sets has grown so large that it threatens to overwhelm rather than enlighten scientists Therefore traditional methods are revised and streamlined complemented by many new methods to address challenging new problems Mathematical Programming plays a key role in this endeavor It helps us to formulate precise objectives e g a clustering criterion or a measure of discrimination as well as the constraints imposed on the solution e g find a partition a covering or a hierarchy in clustering It also provides powerful mathematical tools to build highly performing exact or approximate algorithms This book is based on lectures presented at the workshop on Data Mining and Mathematical Programming October 10-13 2006 Montreal and will be a valuable scientific source of information to faculty students and researchers in optimization data analysis and data mining as well as people working in computer science engineering and applied mathematics
