What Every Engineer Should Know about MATLAB® and Simulink® Adrian B. Biran, 2010-07-20

MATLAB can be used to execute many mathematical and engineering calculations as well as a handheld computer can if not better. Moreover like many other computer languages it can perform tasks that a handheld computer cannot. Compared to other computer languages MATLAB provides many built-in functions that make learning easier and reduce prototyping time. Simulink is a toolbox that extends the possibilities of MATLAB by providing a graphical interface for modeling and simulating dynamical processes. Using examples from mathematics, mechanical and electrical engineering and control and signal processing, *What Every Engineer Should Know About MATLAB and Simulink* provides an introduction to these two computer environments and examines the advantages and limitations of MATLAB. It first explores the benefits of how to use MATLAB to solve problems and then process and present calculations and experimental results. This book also briefly introduces the reader to more advanced features of the software such as object-oriented programming (OOP) and it draws the attention to some specialized toolboxes. Key features of the book include demonstrations of how to visualize the results of calculations in various kinds of graphical representations, write useful script files and functions for solving specific problems, avoid disastrous computational errors, convert calculations into technical reports and insert calculations and graphs into either MS Word or LaTeX. This book illustrates the limitations of the computer as well as the implications associated with errors that can result from approximations or numerical errors. Using selected examples of computer-aided errors, the author explains that the set of computer numbers is discrete and bounded, a feature that can cause catastrophic errors if not properly taken into account. In conjunction with The Mathworks marketers of MATLAB and Simulink, a supplementary website is presented to offer access to software implemented in the book and the script files used to produce the figures. This book was written by Adrian B. Biran of Technion Israel Institute of Technology with contributions by Moshe Breiner, managing director of SimACon.

Modeling and Simulation in Simulink for Engineers and Scientists Mohammad Nuruzzaman, 2004

The subject matter of this book is to present the procedural steps required for modeling and simulating the basic dynamic system problems in SIMULINK, a supplementary part of MATLAB which follows some definitive model. However, the key features of the text can be cited as follows. The book is on the whole a guiding tool for the undergraduate and graduate students of science and engineering who want to work out or simulate the classroom modeling problems using SIMULINK. To check the understanding of SIMULINK output and deliberate the reliability on SIMULINK analytical solutions of the model outputs are inserted in most chapters. Since the text presents modeling ranging from elementary to advanced level, the audience spectrum of the text includes engineers, teachers, researchers and scientists who are beginners in using

SIMULINK Know how aspects of SIMULINK are covered in a made easy way so that the average reader becomes benefited even if starting from the scratch Tabular block links at the end of each chapter required for a particular class of problems help the reader bring them in the model file and simulate quickly Over 300 classroom modeling examples are simulated with clarity and systematic steps Appropriate for individual or classroom exercise There are ten chapters in the book bearing the following titles Introduction to SIMULINK Modeling Mathematical Functions and Waves Modeling Ordinary Differential Equations Modeling Difference Equations Modeling Common Problems of Control Systems Modeling Some Signal Processing Problems Modeling Common Matrix Algebra Problems Modeling Common Statistics and Conversion Problems Fourier Analysis Problems Miscellaneous Modeling and Some Programming Issues **MATLAB for Engineers** Holly Moore,2012 For Freshman or Introductory courses in Engineering and Computer Science With a hands on approach and focus on problem solving this introduction to the powerful MATLAB computing language is designed for students with only a basic college algebra background Numerous examples are drawn from a range of engineering disciplines demonstrating MATLAB s applications to a broad variety of problems **MATLAB for Engineers [electronic Resource]**. Jost,Roland Priemer,David Padgett,2013-02-25 This book combines the teaching of the MATLAB programming language with the presentation and development of carefully selected electrical and computer engineering ECE fundamentals This is what distinguishes it from other books concerned with MATLAB it is directed specifically to ECE concerns Students will see quite explicitly how and why MATLAB is well suited to solve practical ECE problems This book is intended primarily for the freshman or sophomore ECE major who has no programming experience no background in EE or CE and is required to learn MATLAB programming It can be used for a course about MATLAB or an introduction to electrical and computer engineering

where learning MATLAB programming is strongly emphasized. A first course in calculus usually taken concurrently is essential. The distinguishing feature of this book is that about 15% of this MATLAB book develops ECE fundamentals gradually from very basic principles. Because these fundamentals are interwoven throughout, MATLAB can be applied to solve relevant practical problems. The plentiful in-depth example problems to which MATLAB is applied were carefully chosen so that results obtained with MATLAB also provide insights about the fundamentals. With this feedback approach to learning MATLAB, ECE students also gain a head start in learning some core subjects in the EE and CE curricula. There are nearly 200 examples and over 80 programs that demonstrate how solutions of practical problems can be obtained with MATLAB. After using this book, the ECE student will be well prepared to apply MATLAB in all coursework that is commonly included in EE and CE curricula.

MATLAB 5.2 and 5.3 and Simulink 2 and 3 for Engineers Mohand Mokhtari, 2002-05-01. This is a reference for engineers using MATLAB and SIMULINK.
