Antenna Fundamentals for Legacy Mobile Applications and Beyond Issa Elfergani, Abubakar Sadiq Hussaini, Jonathan Rodriguez, Raed Abd-Alhameed, 2017-10-03 This book highlights technology trends and challenges that trace the evolution of antenna design starting from 3rd generation phones and moving towards the latest release of LTE A The authors explore how the simple monopole and whip antenna from the GSM years have evolved towards what we have today an antenna design that is compact multi band in nature and caters to multiple elements on the same patch to provide high throughput connectivity The scope of the book targets a broad range of subjects including the microstrip antenna PIFA antenna and the monopole antenna to be used for different applications over three different mobile generations Beyond that the authors take a step into the future and look at antenna requirements for 5G communications which already has the 5G drive in place with prominent scenarios and use cases emerging They examine these and put in place the challenges that lie ahead for antenna design particularly in mm Wave design The book provides a reference for practicing engineers and under post graduate students working in this field

Development of Coherent Detector Technologies for Sub-Millimetre Wave Astronomy Observations Boon Kok Tan, 2015-09-15 The thesis describes the development of receiver technologies for sub millimetre astronomy instruments focusing on high performance

coherent cryogenic detectors operating close to the superconductor gap frequency The mixer chip which comprises the SIS devices fed by a unilateral finline and matching planar circuits was fabricated on 15 micron silicon substrate using the recently developed Silicon On Insulator SOI technology This offered broadband IF and RF performance with fully integrated on chip planar circuits resulting in an easily reproducible mixer chip and a simple mixer block An important consequence of this design is that it can be extended to the supra THz region and making the fabrication of multi pixel heterodyne arrays feasible The extension of the operation of major telescopes such as ALMA APEX and the GLT from single pixel to large format arrays is the subject of extensive research at present time since it will allow fast mapping combined with high resolution of the submillimetre sky The technology described in this thesis makes a major contribution to this effort Electro-optical System Design, Simulation, Testing, and Training Richard M. Wasserman, Scott Lawrence DeVore, 2002 The past few years have seen an upsurge in the numbers of known Neolithic settlements in Ireland Many of these sites have been excavated by archaeologists based in field units but few are well known to the wider archaeological community The papers in this volume were presented at a conference held at Queen's University Belfast in 2001 which provided a forum for a discussion of the new Neolithic material from Ireland in its wider geographical context Although the bulk of the emerging Irish settlement evidence relates to substantial houses many of these papers consider wider themes including issues of contact and communication along the sea routes and coastal margins of north west Europe questions of diversity and regional patterns of sedentism and mobility and variations in regional food production strategies **Proceedings of the 3rd International Conference on Sensing, Measurement, Communication and Internet of Things Technologies** Peiquan Jin, Zhenyu Zhao, 2025-09-30 This book showcases the latest advancements in Sensing Measurement Communication and Internet of Things IoT technologies This comprehensive collection includes invited contributions and extended research papers that have been presented and discussed on a global scale The proceedings aim to provide a broad perspective featuring robust discussions and in depth studies They cater to a diverse audience of academic researchers industry experts innovative thinkers scholars professionals and technologists from around the world who are actively engaged in the fields of sensing technologies measurement methodologies communication systems and the Internet of Things **Quantum Computing Architecture and Hardware for Engineers** Hiu Yung Wong, 2025-03-27 The purpose of this book is to teach quantum computing hardware from an engineer's perspective Engineers play an important role in quantum computers However college and graduate engineering students usually do not have the required physics and mathematics training to understand how quantum computer hardware works This book provides step by step guidance to connect engineers to the quantum world Prepares readers with the essential mathematics and physics skills to understand and design quantum computers Covers spin qubits and superconducting qubits in a unified framework Uses language accessible to readers with varying backgrounds and a step by step approach Includes simulation codes and superconducting quantum chip design examples
