Interpretation for Structural Geologists covers various topics from deciphering topography using contour patterns to
interpreting folds faults unconformities and dykes By interpreting several types of maps this book gives readers the
confidence to solve difficult geologic questions related to map interpretation in the classroom and in the field Interpreting
geological and structural maps is an inseparable part of learning structural geology in the undergraduate curriculum and
postgraduate development Features approximately 30 full color geological or structural maps and their solutions from basic
to the most complex Includes content appropriate for undergraduate and graduate students and professional geoscientists
alike Presents a self learning guide and teaching manual with minimum instruction required **Tensile Fracturing in**
Rocks Dov Bahat, Avinoam Rabinovitch, Vladimir Frid, 2004-10-05 Tensile Fracturing in Rocks presents field observations on
fracturing of sedimentary rocks and granite outcrops from various provinces in three continents It also combines results of
recent experiments conducted at different laboratories around the world with current theories on fracturing In treating faults
this book limits itself to faults that are associated with joint sets produced by definable causes and occasionally to cases where
interaction between the two types of fracture faults and joints is not clear The book's subject matter is divided over six
chapters which are briefly described below Chapter 1 summarizes current key concepts in fracture physics It starts with a pre-
sentation of the elastic theory of fracture and concentrates on the results of linear elastic fracture mechanics The chapter
touches also upon other fracture properties e.g. crack nucleation dynamic fracturing and slow fracturing processes
Nucleation is treated by statistical mechanics methods incorporating modern approaches of thermal and fiber bundle
processes The analyses of dynamic fracturing and slow fracturing focus on the differences as compared to the linear elastic
approach The controversy in interpreting experimental dynamic results is highlighted as are the surface morphology patterns
that emerge in fracturing and the non Griffith crack extension criterion in very slow fracturing processes **Geological**
