Glimpses into the World of Mathematics Szymon Chlebowski, 2021 Essays collected in this volume deal with various problems from the philosophy of mathematics What connects them are two questions how mathematics is created and how it is acquired In Three Worlds of Mathematics we are familiarized with David Tall s ideas pertaining to the embodied symbolic and formal worlds of mathematics In Basic Ideas of Intuitionism we focus on an epistemological approach to mathematics which is distinctive to constructive mathematics The author focuses on the computational content of intuitionistic logic and shows how it relates to functional programming The Brave Mathematical Ant carefully selects mathematical puzzles related to teaching experiences in a way that the solution requires creativity and is not obtainable by following an algorithm Moreover the solution gives us some new insight into the underlying idea Degrees Of Accessibility Of Mathematical Objects discusses various criteria which can be used to judge accessibility of mathematical objects We find logical complexity range of applications existence of a physical model as well as aesthetic values

Accelerating Expansion Gordon Belot, 2023-07-25 Accelerating Expansion explores some of the philosophical implications of modern cosmology focused on the significance that the discovery of the accelerating expansion of the Universe has for our understanding of time geometry and physics The appearance of the cosmological constant in the equations of general relativity allows one to model universes in which space has an inherent tendency towards expansion This constant introduced by Einstein but subsequently abandoned by him returned to centre stage with the discovery of the accelerating expansion This pedagogically oriented essay begins with a study of the most basic and elegant relativistic world that involves a positive cosmological constant de Sitter spacetime It then turns to the relatives of de Sitter spacetime that dominate modern relativistic cosmology Some of the topics considered include the nature of time and simultaneity in de Sitter worlds the sense in which de Sitter spacetime is a powerful dynamical attractor the limited extent to which observation can give us information about the topology of space in a world undergoing accelerated expansion and cosmologists' favourite sceptical worry about the reliability of evidence and the possibility of knowledge the problem of Boltzmann brains **The**
