V. A. Steklova, 1962 Mathematics, 1963 **Mathematics across the Iron Curtain** Christopher Hollings, 2014-07-16 The theory of semigroups is a relatively young branch of mathematics with most of the major results having appeared after the Second World War This book describes the evolution of algebraic semigroup theory from its earliest origins to the establishment of a full fledged theory Semigroup theory might be termed Cold War mathematics because of the time during which it developed There were thriving schools on both sides of the Iron Curtain although the two sides were not always able to communicate with each other or even gain access to the other's publications A major theme of this book is the comparison of the approaches to the subject of mathematicians in East and West and the study of the extent to which contact between the two sides was possible **Exploring Curvature** James Casey, 2012-12-06 one should not be too ready to erect a wall of separation between nature and the human mind d Alembert Dugas 1955 It is possible to present mathematics in a purely formal way that is to say without any reference to the physical world Indeed in the more advanced parts of abstract algebra and mathematical logic one can proceed only in this manner In other parts of mathematics especially in Euclidean geometry calculus differential equations and surface geometry intimate connections exist between the mathematical ideas and

physical things In such cases a deeper and sometimes quicker understanding can be gained by taking advantage of these connections I am not of course suggesting that one should appeal to physical intuition whenever one gets stuck in a mathematical proof in proofs there is no substitute for rigor Rather the connections with physical reality should be made either to motivate mathematical assumptions or to introduce questions out of which theorems arise or to illustrate the results of an analysis Such interconnections are especially important in the teaching of mathematics to science and engineering students But mathematics students too have much to gain by familiarizing themselves with the interconnections between ideas and real things The present book explores the geometry of curves and surfaces in a physical way **Author & Title**

Catalog J. Henry Meyer Memorial Library, 1967 **Visual Differential Geometry and Forms** Tristan Needham, 2021-07-13 An inviting intuitive and visual exploration of differential geometry and forms Visual Differential Geometry and Forms fulfills two principal goals In the first four acts Tristan Needham puts the geometry back into differential geometry Using 235 hand drawn diagrams Needham deploys Newton's geometrical methods to provide geometrical explanations of the classical results In the fifth act he offers the first undergraduate introduction to differential forms that treats advanced topics in an intuitive and geometrical manner Unique features of the first four acts include four distinct geometrical proofs of the fundamentally important Global Gauss Bonnet theorem providing a stunning link between local geometry and global topology a simple geometrical proof of Gauss's famous Theorema Egregium a complete geometrical treatment of the Riemann curvature tensor of an n manifold and a detailed geometrical treatment of Einstein's field equation describing gravity as curved spacetime General Relativity together with its implications for gravitational waves black holes and cosmology The final act elucidates such topics as the unification of all the integral theorems of vector calculus the elegant reformulation of Maxwell's equations of electromagnetism in terms of 2 forms de Rham cohomology differential geometry via Cartan's method of moving frames and the calculation of the Riemann tensor using curvature 2 forms Six of the seven chapters of Act V can be read completely independently from the rest of the book Requiring only basic calculus and geometry Visual Differential Geometry and Forms provocatively rethinks the way this important area of mathematics should be considered and taught *Discovery*, 1965 **American Book Publishing Record**, 1968
