United States. Congress. Joint Committee on Atomic Energy,1949 *An Introduction to Measure Theory* Terence
Tao,2011-09-14 This is a graduate text introducing the fundamentals of measure theory and integration theory which is the
foundation of modern real analysis The text focuses first on the concrete setting of Lebesgue measure and the Lebesgue
integral which in turn is motivated by the more classical concepts of Jordan measure and the Riemann integral before moving
on to abstract measure and integration theory including the standard convergence theorems Fubini s theorem and the
Caratheodory extension theorem Classical differentiation theorems such as the Lebesgue and Rademacher differentiation
theorems are also covered as are connections with probability theory The material is intended to cover a quarter or semester
s worth of material for a first graduate course in real analysis There is an emphasis in the text on tying together the abstract
and the concrete sides of the subject using the latter to illustrate and motivate the former The central role of key principles
such as Littlewood s three principles as providing guiding intuition to the subject is also emphasized There are a large
number of exercises throughout that develop key aspects of the theory and are thus an integral component of the text As a
supplementary section a discussion of general problem solving strategies in analysis is also given The last three sections
discuss optional topics related to the main matter of the book **The Economic Consequences of Schooling and**
