

Calculating Space and Power Density Requirements for Data Centers

White Paper 155

Revised 2012

By Fred Baumgartner

Executive summary

The typical method of calculating data center power density using a single number of watts per square foot can waste cost and require oversizing an air conditioning system that has caused excessive condensation as well as waste of energy and money. This paper demonstrates how the typical method is flawed and specify power density and airflow and provides an improved approach for calculating space and power densities, including recommended density specifications for typical situations.
