Engineering Joseph M. Powers, Mihir Sen, 2015-01-26 This text focuses on a variety of topics in mathematics in common usage in graduate engineering programs including vector calculus linear and nonlinear ordinary differential equations approximation methods vector spaces linear algebra integral equations and dynamical systems The book is designed for engineering graduate students who wonder how much of their basic mathematics will be of use in practice Following development of the underlying analysis the book takes students through a large number of examples that have been worked in detail Students can choose to go through each step or to skip ahead if they so desire After seeing all the intermediate steps they will be in a better position to know what is expected of them when solving assignments examination problems and when on the job Chapters conclude with exercises for the student that reinforce the chapter content and help connect the subject matter to a variety of engineering problems Students have grown up with computer based tools including numerical calculations and computer graphics the worked out examples as well as the end of chapter exercises often use computers for numerical and symbolic computations and for graphical display of the results *Advances In The Homotopy Analysis Method* Shijun Liao, 2013-11-26 Unlike other analytic techniques the Homotopy Analysis Method HAM is independent of small large physical parameters Besides it provides great freedom to choose equation type and solution expression of related linear high order approximation equations The HAM provides a simple way to guarantee the convergence of solution series Such uniqueness differentiates the HAM from all other analytic approximation methods In addition the HAM can be applied to solve some challenging problems with high nonlinearity This book edited by the pioneer and founder of the HAM describes the current advances of this powerful analytic approximation method for highly nonlinear problems Coming from different countries and fields of research the authors of each chapter are top experts in the HAM and its applications The Calculus Collection Caren L. Diefenderfer, Roger B. Nelsen, 2010-12-31 The Calculus Collection is a useful resource for everyone who teaches calculus in high school or in a 2 or 4 year college or university It consists of 123 articles selected by a panel of six veteran high school teachers each of which was originally published in Math Horizons MAA Focus The American Mathematical Monthly The College Mathematics Journal or Mathematics Magazine The articles focus on engaging students who are meeting the core ideas of calculus for the first time The Calculus Collection is filled with insights alternate explanations of difficult ideas and suggestions for how to take a standard problem and open it up to the rich mathematical explorations available when you encourage students to dig a little deeper Some of the articles reflect an enthusiasm for bringing calculators and computers into the classroom while others consciously address themes from the calculus reform movement But most of the articles are simply interesting and timeless explorations of the mathematics encountered in a first course in calculus *El-Hi Textbooks and Serials in Print* ,2006 *Instructor's Solutions Manual* Thomas L.
