Research Anthology on Securing Mobile Technologies and Applications Management Association, Information Resources, 2021-02-05 Mobile

technologies have become a staple in society for their accessibility and diverse range of applications that are continually growing and advancing. Users are increasingly using these devices for activities beyond simple communication including gaming and e-commerce and to access confidential information including banking accounts and medical records. While mobile devices are being so widely used and accepted in daily life and subsequently housing more and more personal data, it is evident that the security of these devices is paramount. As mobile applications now create easy access to personal information, they can incorporate location tracking services and data collection can happen discreetly behind the scenes. Hence, there needs to be more security and privacy measures enacted to ensure that mobile technologies can be used safely. Advancements in trust and privacy defensive strategies and steps for securing the device are important foci as mobile technologies are highly popular and rapidly developing. The Research Anthology on Securing Mobile Technologies and Applications discusses the strategies, methods, and technologies being employed for security amongst mobile devices and applications. This comprehensive book explores the security support that needs to be required on mobile devices to avoid application damage, hacking, security breaches, and attacks or unauthorized accesses to personal data. The chapters cover the latest technologies that are being used such as cryptography, verification systems, security policies, and contracts and general network security procedures along with a look into cybercrime and forensics. This book is essential for software engineers, app developers, computer scientists, security and IT professionals, practitioners, stakeholders, researchers, academicians, and students interested in how mobile technologies and applications are implementing security protocols and tactics amongst devices.

Rapidly Deployable Mobile Security Solutions for the Military: Navy Cyber Policies and Threats, Security, Mobile Devices, Bring Your Own Device (BYOD), Risk Management, Android Application Program U. S. Military, Department of Defense (DoD), U. S. Government, 2018-02-25. The Navy has seen a significant increase in the presence of mobile and smart devices on its units due to advancements in technology and younger sailors' desire to be connected at all times. These devices create security threats due to their easily concealable size and their host of connectivity and image-related features. The insider threat, intentional or not, now includes the ability to take photos, record conversations, share data wirelessly, and communicate official use and classified information all more easily than ever before. Current enterprise solutions and associated policy does not address managing personal devices. In fact, management of personal devices is currently outside the Department of Defense (DOD) effort to control Personal Electronic Devices (PED) since the organization does not own the device and therefore has no way to mandate what must or must not be installed on them. The current path to a bring your own device (BYOD) policy is unclear. Security vulnerabilities with these devices have not been addressed in a uniform manner in policy or in practice. It is with these statements in mind that we address how to take the first steps in developing feasible management of personal devices on naval units and potentially throughout the DOD. In this study, we provide a thorough evaluation of National Institute for Standards and Technology, Defense Information Systems Agency, and DOD publications to

provide a starting point for adapting current policy and to guide the development of our application We then examine the feasibility of implementable software application solutions to hardware features that pose a threat to security Specific research addresses why each hardware feature on a mobile device is a security concern how it is controlled inside the Android Studio API and how we utilize these controls to lockdown and then unlock said hardware features through a simple proof of concept Android application Finally we provide examples of how future work can grow our application into a security manager controlled program to secure devices and find a path toward making BYOD a reality Bring Your Own Device Security Policy Compliance Framework Rathika Palanisamy,Azah Anir Norman, Miss Laiha Mat Kiah,Tutut Herawan,2025-05-13 Proliferation of Bring Your Own Device BYOD has instigated a widespread change fast outpacing the security strategies deployed by organizations The influx of these devices has created information security challenges within organizations further exacerbated with employees inconsistent adherence with BYOD security policy To prevent information security breaches compliance with BYOD security policy and procedures is vital This book aims to investigate the factors that determine employees BYOD security policy compliance by using mixed methods approach Security policy compliance factors BYOD practices and security risks were identified following a systematic review approach Building on Organizational Control Theory Security Culture and Social Cognitive Theory a research framework positing a set of plausible factors determining BYOD security policy compliance was developed Next with a purposive sample of eight information security experts from selected public sector organizations interviews and BYOD risk assessments analysis were performed to furnish in depth insights into BYOD risks its impact on organizations and recommend control measures to overcome them This led to the suggestion of four control measures to mitigate critical BYOD security risks such as Security Training and Awareness SETA policy top management commitment and technical countermeasures The control measures were mapped into the research framework to be tested in the following quantitative phase The proposed research framework was tested using survey results from 346 employees of three Critical National Information Infrastructure CNII agencies Using Partial Least Squares Structural Equation Modelling PLS SEM the framework s validity and reliability were evaluated and hypotheses were tested Findings show that perceived mandatoriness self efficacy and psychological ownership are influential in predicting employees BYOD security policy compliance Specification of security policy is associated with perceived mandatoriness while BYOD IT support and SETA are significant towards self efficacy Unexpectedly security culture has been found to have no significant relationship to BYOD security policy compliance Theoretical practical and methodological contributions were discussed and suggestions for future research were recommended The analysis led to a number of insightful findings that contribute to the literature and the management which are predominantly centered on traditional computing In view of the ever increasing BYOD threats to the security of government information it is imperative that IT managers establish and implement effective policies to protect vital information assets Consequently the findings of this study may benefit

policymakers particularly in the public sector in their efforts to increase BYOD security policy compliance among employees
