of exterior ballistics 1 Skydiving and parachute falling related with the trajectory of a parachutist launched from a horizontally flying airplane with un deployed parachute in different meteorological conditions and in presence of air resistance and wind 2 The ballistics of projectile fragments that is an important element of Terminal Ballistics necessary to study the effectiveness of fragmentation ammunitions on the personnel and objects and other problems related with the construction of fragmentation ammunitions or with Forensic Sciences Exterior Ballistics with Applications is comprehensive and serves as reference material to provide answers to problems encountered in the practice of motion of unguided projectiles skydiving and flying fragments of antipersonnel ammunitions
