things have happened since the writing of the first edition in 1983 One of them is recent arousal of strong interest in general aspects of neural computing or neural networks as the previous neural models are nowadays called The incentive of course has been to develop new computers Especially it may have been felt that the so called fifth generation computers based on conventional logic programming do not yet contain in formation processing principles of the same type as those encountered in the brain All new ideas for the neural computers are of course welcome On the other hand it is not very easy to see what kind of restrictions there exist to their implementation In order to approach this problem systematically certain lines of thought disciplines and criteria should be followed It is the purpose of the added Chapter 9 to reflect upon such problems from a general point of view Another important thing is a boom of new hardware technologies for distributed associative memories especially high density semiconductor circuits and optical materials and components The era is very close when the parallel processors can be made all optical Several working associative memory architectures based solely on optical technologies have been constructed in recent years For this reason it was felt necessary to include a separate chapter Chapter 10 which deals with the optical associative memories Part of its contents is taken over from the first edition

Computational Neuroscience: Cortical Dynamics Péter Érdi, 2004-08-03 This book presents thoroughly revised tutorial papers based on lectures given by leading researchers at the 8th International Summer School on Neural Networks in Erice Italy in October November 2003 The eight tutorial papers presented provide competent coverage of the field of cortical dynamics consolidating recent theoretical and experimental results on the processing transmission and imprinting of information in the brain as well as on important functions of the cortical area such as cortical rhythms cortical neural plasticity and their structural basis and functional significance The book is divided in two topical sections on fundamentals of cortical dynamics and mathematical models of cortical dynamics

The Second Age of Computer Science Subrata Dasgupta, 2018 Between the genesis of computer science in the 1960s and the advent of the World Wide Web around 1990 computer science evolved in significant ways The author has termed this period the second age of computer science This book describes its evolution in the form of several interconnected parallel histories
