Autonomous Navigation With Radar:

Robotic Navigation and Mapping with Radar Martin Adams, Martin David Adams, 2012 A practical treatment of short range radar processing for reliable object detection at ground level *Radar and Sonar Imaging and Processing* Andrzej Stateczny, Krzysztof Kulpa, Witold Kazimierski, 2021-01-22 The Special Issue Radar and Sonar Imaging Processing is a collection of 21 articles exploring many topics related to remote sensing with radar and sonar sensors In this editorial we present short introductions of the published articles The series of articles in this SI deal with a broad profile of aspects of the use of radar and sonar images in line with the latest scientific trends while making use of the latest developments in science including artificial intelligence It can be said that both radar and sonar imaging and processing still remain a hot topic and much research in this area is being conducted worldwide New techniques and methods for extracting information from radar and sonar sensors and data have been proposed and verified Some of these will stimulate further research while others have reached maturity and can be considered for industrial implementation and development **Precision FMCW Short-Range Radar for Industrial Applications** Boris A. Atayants, Viacheslav M. Davydochkin, Victor V. Ezerskiy, Valery S. Parshin, Sergey M. Smolskiy, 2014-04-01 This book describes methods for making accurate radar measurements of short distances in applications where physical contact with materials is impractical Sources of error are identified and methods of reducing these errors are described Practical test procedures for measuring instruments are also provided Much of the book is dedicated to providing radar engineers with practical applications detailing the conditions equipment and approach of experimental estimation With the help of computer simulation the achievable advantages in accuracy of radar range measurement with various approaches are revealed and quantitatively estimated Readers are also provided with methods of random process theory and mathematical statistics along with functional analysis and optimization **Field and Service Robotics** Alexander Zelinsky, 2012-12-06 Joe Engelberger the pioneer of the robotics industry wrote in his 1989 book *Robotics in Service* that the inspiration to write his book came as a reaction to an industry sponsored forecast study of robot applications which predicted that in 1995 applications of robotics outside factories the traditional domain of industrial robots would amount to less than 1% of total sales Engelberger believed that this forecast was very wrong and instead predicted that the non industrial class of robot applications would become the largest class Engelbergers prediction has yet to come to pass However he did correctly foresee the growth in non traditional applications of robots Robots are now beginning to march from the factories and into field and service applications This book presents a selection of papers from the first major international conference dedicated to field and service applications of robotics This selection includes papers from the leading research laboratories in the world together with papers from companies that are building and selling new and innovative robotic technology It describes interesting aspects of robots in the field ranging from mining agriculture construction cargo handling subsea operations removal of landmines to terrestrial exploration It also covers a diverse range

of service applications such as cleaning propagating plants and aiding the elderly and handicapped and gives considerable attention to the technology required to realise robust reliable and safe robots

Active Sensors For Local Planning In Mobile Robotics Penelope Probert Smith, 2001-12-05 This book describes recent work on active sensors for mobile robots An active sensor interacts with its surroundings to supply data on demand for a particular function gathering and abstracting information according to need rather than acting as a generic data gatherer Details of the physical operation are hidden The book deals mainly with active range sensors which provide rapid information for local planning describing extraction of two dimensional features such as lines corners and cylinders to reconstruct a plan of a building It is structured according to the physical principles of the sensors since to a large extent these determine the function of the sensors and the methods of processing Recent work using sonar optoelectronic sensors and radar is described
