Integrated Vehicle Health Management Ian K Jennions, 2013-09-25 Integrated Vehicle Health Management IVHM is a relatively new

subject with its roots back in the space sector of the early 1990s. Although many of the papers written around that time did not refer to it as IVHM, the fundamental principles of considering an integrated end-to-end system to monitor the overall health of the asset were clearly visible. As the subject of Integrated Vehicle Health Management (IVHM) and its associated technologies have grown up, businesses are making the transformation from selling a product to selling a service. This can be viewed as a positive disruption as a relatively small technology breakthrough is being brought to market for a large business benefit. The sequence sense acquire transfer analyze act feeds the information processed data on the asset's health into the Operations or Management control center. Here decisions can be made on maintenance actions with knowledge of the supply chain status, MRO loading etc. provided by Maintenance and Logistics systems. Undoubtedly, a much more efficient and economical *modus operandi*. This book brings together a collection of twenty-two SAE International Technical papers on this very theme, organized according to specific areas of interest: Engines, Airframes, Electrical Power Systems, Supporting Systems, Architecture. They were selected by Dr Ian K Jennions, Director of IVHM Center at Cranfield University in the UK. Dr Jennions was also the editor of three other books on Integrated Vehicle Health Management published by SAE International: *IVHM Perspectives on an Emerging Field*, *IVHM Business Case*, *Theory and Practice of IVHM*. The Technology **Automating Systems Development** David R. Benyon, Steve Skidmore, 2012-12-06. 1. INTRODUCTION. These proceedings are the result of a conference on Automating Systems Development held at Leicester Polytechnic, England, on 14 to 16 April 1987. The conference was attended by over 170 delegates from industry and academia, and it represents a comprehensive review of the state of the art of the use of the computer-based tools for the analysis, design, and construction of Information Systems (IS). Two parallel streams ran throughout the conference. The academic or research papers were the fruit of British, European, and Canadian research, with some of the papers reflecting UK Government-funded Alvey or European ESPRIT research projects. Two important touchstones guided the selection of academic papers. Firstly, they should be primarily concerned with system rather than program development. Secondly, they should be easily accessible to delegates and readers. We felt that formal mathematical papers had plenty of other opportunities for airing and publication. The second stream was the applied programme, a set of formal presentations given by leading software vendors and consultancies. It is clear that many advances in systems development are actually applied rather than research-led. Thus it was important for delegates to hear how leading edge companies view the State of the Art. This was supported by a small exhibition area where certain vendors demonstrated the software they had introduced in the formal presentation. **Condition-Based Maintenance in Aviation** Ravi Rajamani, 2018-12-11. Condition Based Maintenance in Aviation: The History, The Business, and The Technology describes the history and practice of Condition Based Maintenance (CBM) systems by showcasing ten technical papers from the archives of SAE International, stretching from the dawn of the jet age down to the present times. By scientifically understanding how different components degrade during operations, it is possible to schedule inspections, repairs, and overhauls at appropriate

intervals so that any incipient failure can be detected well in advance Today this includes more sensors and analytics so that periodic inspections are replaced by automated continuous inspections and analytical methods that detect imminent failures and predict degradation issues more economically and efficiently Similar concepts are also being developed for delivering prognostics functions such as tracking of remaining useful life RUL of life limited parts in aircraft engines The discipline within CBM that deals with this is called prognostics and health management PHM which covers all aspects of diagnostics and prognostics including modeling of systems and subsystems sensing data transmission storage and retrieval analytical methods and decision making Traditionally nondestructive testing NDT methods have been employed during the major airplane checks to assess structural damage These techniques are enhanced with in situ sensing techniques that can continuously monitor aircraft structures and report on their health The move to condition based assessment of maintenance needs to be balanced by the assurance that safety is not compromised that initial cost of new equipment is amortized by the savings and that regulatory authorities are on board with any modifications to the planned maintenance schedule The trend is clearly to include more CBM functions into Maintenance Repair and Overhaul MRO processes so better cost control can be achieved without ever comprising passenger safety
