The Behaviour and Design of Steel Structures to EC3, Fourth Edition N.S. Trahair, M.A. Bradford, David Nethercot, Leroy Gardner, 2007-11-21 The fully revised fourth edition of this successful textbook fills a void which will arise when British designers start using the European steel code EC3 instead of the current steel code BS5950 The principal feature of the fourth edition is the discussion of the behaviour of steel structures and the criteria used in design according to the British version of EC3 Thus it serves to bridge the gap which too often occurs when attention is concentrated on methods of analysis and the sizing of structural components Because emphasis is placed on the development of an understanding of behaviour many analytical details are either omitted in favour of more descriptive explanations or are relegated to appendices The many worked examples both illustrate the behaviour of steel structures and exemplify details of the design process *The Behaviour and Design of Steel Structures to EC3* is a key text for senior undergraduate and graduate students and an essential reference tool for practising structural engineers in the UK and other countries

Steel Structures Hassan Al Nageim, 2016-11-03 The fourth edition of this popular steel structures book contains references to both Eurocodes and British Standards All the material has been updated where necessary and new and revised worked examples are included Sections on the meaning the purpose and limits of structural design sustainable steel building and energy saving have been updated The initial chapters cover the essentials of structural engineering and structural steel design The remainder of the book is dedicated to a detail examination of the analysis and design of selected types of structures presenting complex designs in an understandable and user friendly way These structures include a range of single and multi storey buildings floor systems and wide span buildings Each design example is illustrated with applications based on current Eurocodes or British Standard design data thus assisting the reader to share in the environment of the design process that normally takes place in practical offices and develop real design skills Two new chapters on the design of cased steel columns and plate girders with and without rigid end posts to EC4 EC3 are included too References have been fully updated and include useful website addresses Emphasis is placed on practical design with a view to helping undergraduate students and newly qualified engineers bridge the gap between academic study and work in the design office Practising engineers who need a refresher course on up to date methods of design and analysis to EC3 and EC4 will also find the book useful and numerous worked examples are included
