

DETERMINATION OF PHOSPHORIC ACID CONTENT IN SOFT DRINKS

LAB PH 8

From Chemistry with Calculators, Vernier Software & Technology, 2000

INTRODUCTION

Phosphoric acid is one of several weak acids that present in carbonated beverages. It is a component of all cola soft drinks. Phosphoric acid has a much higher concentration than other acids present in a soft drink, so its concentration can be determined by a simple acid-base titration.

In this experiment, you will titrate a sample of a cola soft drink with a sodium hydroxide solution and determine the concentration of phosphoric acid, H_3PO_4 . Hydrogen ions from the first dissociation of phosphoric acid react with hydroxide ions from the NaOH in a one-to-one ratio in the overall reaction:

In this experiment, you will use a pH Sensor to monitor pH as you titrate. The region of most rapid pH change will then be used to determine the equivalence point. The volume of NaOH titrant required to reach the equivalence point will be used to determine the molarity of the H_3PO_4 .

PURPOSE

The purpose of this experiment is to determine the amount of phosphoric acid, H_3PO_4 , in a variety of soft drinks by titrating each sample with sodium hydroxide, NaOH.
