Block Transceivers Paulo Diniz, Wallace Martins, Markus Lima, 2022-05-31 The demand for data traffic over mobile communication networks has substantially increased during the last decade As a result these mobile broadband devices spend the available spectrum fiercely requiring the search for new technologies In transmissions where the channel presents a frequency selective behavior multicarrier modulation MCM schemes have proven to be more efficient in terms of spectral usage than conventional modulations and spread spectrum techniques The orthogonal frequency division multiplexing OFDM is the most popular MCM method since it not only increases spectral efficiency but also yields simple transceivers All OFDM based systems including the single carrier with frequency division equalization SC FD transmit redundancy in order to cope with the problem of interference among symbols This book presents OFDM inspired systems that are able to at most halve the amount of redundancy used by OFDM systems while keeping the computational complexity comparable Such systems herein called memoryless linear time invariant LTI transceivers with reduced redundancy require low complexity arithmetical operations and fast algorithms In addition whenever the block transmitter and receiver have memory and or are linear time varying LTV it is possible to reduce the redundancy in the transmission even further as also discussed in this book For the transceivers with memory it is possible to eliminate the redundancy at the cost of making the channel equalization more difficult Moreover when time

varying block transceivers are also employed then the amount of redundancy can be as low as a single symbol per block regardless of the size of the channel memory With the techniques presented in the book it is possible to address what lies beyond the use of OFDM related solutions in broadband transmissions Table of Contents The Big Picture Transmultiplexers OFDM Memoryless LTI Transceivers with Reduced Redundancy FIR LTV Transceivers with Reduced Redundancy
