Elements of Robotics Mordechai Ben-Ari, Francesco Mondada, 2017-10-25 This open access book bridges the gap between playing with robots in school and studying robotics at the upper undergraduate and graduate levels to prepare for careers in industry and research Robotic algorithms are presented formally but using only mathematics known by high school and first year college students such as calculus matrices and probability Concepts and algorithms are explained through detailed diagrams and calculations Elements of Robotics presents an overview of different types of robots and the components used to build robots but focuses on robotic algorithms simple algorithms like odometry and feedback control as well as algorithms for advanced topics like localization mapping image processing machine learning and swarm robotics These algorithms are demonstrated in simplified contexts that enable detailed computations to be performed and feasible activities to be posed Students who study these simplified demonstrations will be well prepared for advanced study of robotics The algorithms are presented at a relatively abstract level not tied to any specific robot Instead a generic robot is defined that uses elements common to most educational robots differential drive with two motors proximity sensors and some method of displaying output to the user The theory is supplemented with over 100 activities most of which can be successfully implemented using inexpensive educational robots Activities that require more computation can be programmed on a computer Archives are available with suggested implementations for the Thymio robot and standalone programs in Python

The Design and Analysis of Algorithms Dexter Kozen, 1992 These are my lecture notes from CS681 Design and Analysis of Algorithms a one semester graduate course I taught at Cornell for three consecutive fall semesters from 88 to 90 The course serves a dual purpose to cover core material in algorithms for graduate students in computer science preparing for their PhD qualifying exams and to introduce theory students to some advanced topics in the design and analysis of algorithms The material is thus a mixture of core and advanced topics At first I meant these notes to supplement and not supplant a textbook but over the three years they gradually took on a life of their own In addition to the notes I depended heavily on the texts A V Aho J E Hopcroft and J D Ullman The Design and Analysis of Computer Algorithms Addison Wesley 1975 M R Garey and D S Johnson Computers and Intractability A Guide to the Theory of NP Completeness W H Freeman 1979 R E Tarjan Data Structures and Network Algorithms SIAM Regional Conference Series in Applied Mathematics 44 1983 and still recommend them as excellent references
