Design and Analysis of Clinical Trials Shein-Chung Chow,Jen-Pei Liu,2008-12-04 Praise for the First Edition of Design and Analysis of Clinical Trials An excellent book providing a discussion of the clinical trial process from designing the study through analyzing the data and to regulatory requirement could easily be used as a classroom text to understand the process in the new drug development area Statistical Methods in Medicine A complete and balanced presentation now revised updated and expanded As the field of research possibilities expands the need for a working understanding of how to carry out clinical trials only increases New developments in the theory and practice of clinical research include a growing body of literature on the subject new technologies and methodologies and new guidelines from the International Conference on Harmonization ICH Design and Analysis of Clinical Trials Second Edition provides both a comprehensive unified presentation of principles and methodologies for various clinical trials and a well balanced summary of current regulatory requirements This unique resource bridges the gap between clinical and statistical disciplines covering both fields in a lucid and accessible manner Thoroughly updated from its first edition the Second Edition of Design and Analysis of Clinical Trials features new topics such as Clinical trials and regulations especially those of the ICH Clinical significance reproducibility and generalizability Goals of clinical trials and target population New study designs and trial types Sample size determination on equivalence and noninferiority trials as well as comparing variabilities Also three entirely new chapters cover Designs for cancer clinical trials Preparation and implementation of a clinical protocol Data management of a clinical trial Written with the practitioner in mind the presentation assumes only a minimal mathematical and statistical

background for its reader. Instead, the writing emphasizes real life examples and illustrations from clinical case studies as well as numerous references. 280 of them new to the Second Edition to the literature. Design and Analysis of Clinical Trials, Second Edition, will benefit academic, pharmaceutical, medical, and regulatory scientists, researchers, statisticians, and graduate level students in these areas by serving as a useful, thorough reference source for clinical research. Research Methods in Practice. Dahlia K. Remler, Gregg G. Van Ryzin, 2014-03-24. The Second Edition of *Research Methods in Practice: Strategies for Description and Causation* sets an entirely new standard for presenting and learning research methods. The perspective gained from this text makes it a truly necessary tool for such applied disciplines as public affairs and administration, public policy, psychology, urban affairs, education, sociology, social work, business, public health, political science, economics, communications, and criminal justice. Imbued with a deep commitment to make social and policy research methods accessible and meaningful, the Second Edition of *Research Methods in Practice: Strategies for Description and Causation* compels and inspires students to truly grasp the logic and limits of the latest research appearing in academic journals, government reports, and the media. Authors Dahlia K. Remler and Gregg G. Van Ryzin cover the most pertinent issues and methods, emphasizing the critical interpretation and practical application of research findings. Both causation and description, and the distinction between them, are emphasized and maintained thematically throughout the text. Concepts are taught through in-depth examples such as Fighting Malaria in Kenya, The U.S. Poverty Measure, The Fallout from Hurricane Katrina, Family Dinners, and Teenage Substance Abuse, and The Effect of Poverty on Mental Health. The realistic trade-offs, uncertainties, habits, and excitement of the research experience come through on every page. This is the best text available for teaching students the fundamentals of research design and statistics and for introducing them to the difficulties inherent in evaluation research and causal inference.
