September 2010 , Design Innovation and Network Architecture for the Future Internet Boucadair, Mohamed, Jacquenet, Christian, 2021-04-16 For the past couple of years network automation techniques that include software defined networking SDN and dynamic resource allocation schemes have been the subject of a significant research and development effort. Likewise network functions virtualization NFV and the foreseeable usage of a set of artificial intelligence techniques to facilitate the processing of customers requirements and the subsequent design delivery and operation of the corresponding services are very likely to dramatically distort the conception and the management of networking infrastructures. Some of these techniques are being specified within standards developing organizations while others remain perceived as a buzz without any concrete deployment plans disclosed by service providers. An in depth understanding and analysis of these approaches should be conducted to help internet players in making appropriate design choices that would meet their requirements as well as their customers. This is an important area of research as these new developments and approaches will inevitably reshape the internet and the future of technology. Design Innovation and Network Architecture for the Future Internet sheds light on the foreseeable yet dramatic evolution of internet design principles and offers a comprehensive overview on the recent advances in networking techniques that are likely to shape the future internet. The Evolution of China's Anti-Poverty Strategies William N. Brown, 2022-11-09. This open access book presents the findings of the author's 3 decades of studying China's evolving anti-poverty strategies. It argues that much of the billions that nations spend yearly on economic aid is used inefficiently or to treat the symptoms but not the root causes of poverty. China, however, has evolved an effective sustainable alternative by providing the means for self-reliance to not only relieve economic poverty but also poverty of spirit. As a result, the success of China's historic war on poverty has been due not only to top-down visionary leadership but also to the bottom-up initiatives of an empowered populace unswervingly united in ending poverty. From 1993 to 2019, the author drove over 200,000 km around China and interviewed hundreds of people from all walks of life as he explored the evolution of China's anti-poverty strategies from simplistic aid and redistribution, which often engendered dependency and poverty of spirit, to empowerment by fostering self-reliance, or as Chinese put it, blood production rather than blood transfusion. The primary method of empowerment was to provide modern infrastructure: roads first, then riches, so rural dwellers in remote Inner Mongolia or the Himalayan heights of Tibet had the same access to markets, jobs, and internet for e-commerce as their urban counterparts. People who seized the opportunities and prospered first then used their newfound wealth and experience to help others. The stories in this book include a Tibetan entrepreneur whose family was impoverished in spite of 300 years of

service to the Panchen Lama or the farm girl with 4 years of education who now has several international schools a biotechnology company and poverty alleviation projects across China or the photographer who walked 40 000 km through deserts to chronicle the threat of desertification Their tales underscore how diverse people across China helped make possible China's success in alleviating absolute poverty and why Chinese are now confident in achieving a moderately prosperous society
