Geospatial Approaches to Energy Balance and Breast Cancer David Berrigan, Nathan A. Berger, 2019-07-15 Cancer occurs in specific places and spaces each of which have identifiable geographic coordinates characterized by unique natural built and social characteristics all of which contribute significantly to cancer across the spectrum from etiology through diagnosis treatment and outcomes In the first volume of this series published in 2010 a single chapter was focused on these geographic influences Since then the field of geospatial studies of cancer prevention and control has exploded in approaches and applications Accordingly this volume focuses on

what has now become a very specific research endeavor Geospatial Factors Impacting Breast Cancer The book provides important insights into this relatively new and rapidly developing field It should be of value to all students of the Energy Balance Cancer Series and a wide ranging introduction to problems in cancer prevention and control for geographers demographers and other researchers with a geospatial perspective Moreover it provides important information for all oncologists endocrinologists and behavioral modification professionals to better understand their patients in the context of their environment It should also provide important considerations for physicians scientists public health professionals and disparity investigator planning clinical trials community interventions and community planning **How to Make Maps**

Peter Anthamatten, 2020-12-27 The goal of How to Make Maps is to equip readers with the foundational knowledge of concepts they need to conceive design and produce maps in a legible clear and coherent manner drawing from both classical and modern theory in cartography This book is appropriate for graduate and undergraduate students who are beginning a course of study in geospatial sciences or who wish to begin producing their own maps While the book assumes no a priori knowledge or experience with geospatial software it may also serve GIS analysts and technicians who wish to explore the principles of cartographic design The first part of the book explores the key decisions behind every map with the aim of providing the reader with a solid foundation in fundamental cartography concepts Chapters 1 through 3 review foundational mapping concepts and some of the decisions that are a part of every map This is followed by a discussion of the guiding principles of cartographic design in Chapter 4 how to start thinking about putting a map together in an effective and legible form Chapter 5 covers map projections the process of converting the curved earth's surface into a flat representation appropriate for mapping Chapters 6 and 7 discuss the use of text and color respectively Chapter 8 reviews trends in modern cartography to summarize some of the ways the discipline is changing due to new forms of cartographic media that include 3D representations animated cartography and mobile cartography Chapter 9 provides a literature review of the scholarship in cartography The final component of the book shifts to applied technical concepts important to cartographic production covering data quality concepts and the acquisition of geospatial data sources Chapter 10 and an overview of software applications particularly relevant to modern cartography production GIS and graphics software Chapter 11 Chapter 12 concludes the book with examples of real world cartography projects discussing the planning data collection and design process that lead to the final map products This book aspires to introduce readers to the foundational concepts both theoretical and applied they need to start the actual work of making maps The accompanying website offers hands on exercises to guide readers through the production of a map from conception through to the final version as well as PowerPoint slides that accompany the text Strategies for Landscape Representation Paul Cureton, 2016-12-08 Strategies for Landscape Representation discusses a variety of digital and analogue production techniques for the representation of landscape at multiple scales Careful consideration is required to represent time and to ensure accuracy of representation and
