Digit Ratio John T. Manning, 2002 Manning biological sciences University of Liverpool argues that the relative lengths of the second and fourth fingers are genetically linked to hormone and sex related traits and by extension with sperm counts family size musical genius sporting prowess autism depression homosexuality heart problems and breast cancer He suggests that the study of the ratio between the lengths of the second and fourth finger can broaden our understanding of human ability behavior and health Three photographs 38 figures and eight tables are included Annotation copyrighted by Book News Inc Portland OR **American Scientist**, 2002 *Digit Ratio* John T. Manning, 2002 [Analyzing Contemporary Fertility](#) Robert Schoen, 2020-08-12 This edited volume offers state of the art research on the dynamics of contemporary fertility by examining the implications of the economic and social forces that are driving the rapid change in fertility behavior and the changing context determinants and measurement of contemporary human reproduction The volume explores new theoretical avenues that seek to incorporate uncertainty examine social contagion effects and explain the rise in childlessness Reproductive attitudes are re examined in chapters that deal with models of parenthood and with the persistence of race ethnic nativity differences A new and important subject of multi partner fertility is also described by examining it in the context of total fertility and from the usually neglected perspective of men The impact of divorce on fertility the measurement of childlessness and the postponement of first births developments in assortative mating and fertility and current patterns of interracial fertility are also addressed in this volume By combining up to date research spanning the entire field to illuminate contemporary developments the book is a valuable source for demographers sociologists economists and all those interested in understanding fertility in today's world **Offspring** National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Population, Panel for the Workshop on the Biodemography of Fertility and Family Behavior, 2003-05-04 Despite recent advances in our understanding of the genetic basis of human behavior little of this work has penetrated into formal demography Very few demographers worry about how biological processes might affect voluntary behavior choices that have demographic consequences even though behavioral geneticists have documented genetics effects on variables such as parenting and divorce Offspring Human Fertility Behavior in Demographic Perspective brings together leading researchers from a wide variety of disciplines to review the state of research in this emerging field and to identify promising research directions for the future *Evolutionary Perspectives on Human Reproductive Behavior* Dori LeCroy, Peter Moller, 2000 A central aspect of human adaptation reproductive behaviour is studied through the multiple lenses of philosophy biology psychology and anthropology all united by an evolutionary perspective Although reproduction is an intrinsic mechanism of evolution this colloquium shows that reproductive behaviours yield new significance for evolution theory when re examined in a multidisciplinary setting This volume focuses on explication of the adaptive evolved nature of

our own reproduction with topics such as how mate choice shaped human nature symmetry in mate selection the evolution of moral dispositions and the sexist order of the bonobos This look at reproduction as a mechanism of human evolution reveals underlying physiologic mechanisms as well as comparative and interesting cross cultural aspects that emerge from social sciences and anthropology *Human Reproductive Behaviour* Laura Betzig, Monique Borgerhoff Mulder, Paul

Turke, 1988-03-31 **Dynamics of Human Reproduction** James W. Wood, 2017-09-29 Awarded the W W Howells Award for the Outstanding Book in Biological Anthropology this volume presents a comprehensive integrated and up to date overview of the major physiological and behavioral factors affecting human reproduction In attempting to identify the most important causes of variation in fertility within and among human populations Wood summarizes data from a wide range of societies Trained as an anthropologist as well as a demographer he devotes special attention to so called natural fertility populations in which modern contraceptives and induced abortion are not used to limit reproductive output Such an emphasis enables him to study the interaction of biology and behavior with particular clarity The volume weaves together the physiological demographic and biometric approaches to human fertility in a way that will encourage future interdisciplinary research Instead of offering a general overview the focus is to answer one question Why does fertility and the number of live births vary from couple to couple within any particular population and from population to population across the human species as a whole Topics covered include ovarian function conception and pregnancy intrauterine mortality reproductive maturation and senescence coital frequency and the waiting time to conception marriage patterns and the initiation of reproduction the fertility reducing effects of breastfeeding the impact of maternal nutrition on reproduction and reproductive seasonality This unique combination of comprehensive subject matter and an integrated analytical approach makes the book ideally suited both as a graduate level textbook and as a reference work How We Do It Robert Martin, 2013-06-11 A

primatologist explores the mystery of the origins of human reproduction explaining that understanding the evolutionary past can provide insight into what worked what didn't and what it all means for the future of mankind Fertility, Biology, and Behavior John Bongaarts, Robert E. Potter, 2013-10-22 Fertility Biology and Behavior An Analysis of the Proximate Determinants presents the proximate determinants of natural fertility This book discusses the biological and behavioral dimensions of human fertility that are linked to intermediate fertility variables Organized into nine chapters this book begins with an overview of the mechanisms through which socioeconomic variables influence fertility This text then examines the absolute and relative age specific marital fertility rates of selected populations Other chapters consider the trends in total fertility rates of selected countries including Colombia Kenya Korea Indonesia Mexico Pakistan France and United States This book discusses as well the effects of deliberate marital fertility control through contraception and induced abortion The final chapter deals with the management of sex composition and implications for birth spacing This book is a valuable resource for reproductive physiologists social scientists demographers statisticians biologists and graduate students with an

interest in the biological and behavioral control of human fertility *The Biodemography of Human Reproduction and Fertility* Joseph Lee Rodgers, Hans-Peter Kohler, 2012-12-06 The book that you hold in your hands is the second in a series The two titles in the series are the following Genetic Influences on Human Fertility and Sexuality Theoretical and Empirical Contributions from the Biological and Behavior Sciences Edited by Joseph Lee Rodgers David C Rowe Warren B Miller Published by Kluwer Academic Press 2000 The Biodemography of Human Reproduction and Fertility Edited by Joseph Lee Rodgers Hans Peter Kohler Published by Kluwer Academic Press 2002 The series has published chapters by researchers who study human fertility from a particular perspective Biodemography We welcome your interest and participation in this developing subfield Or perhaps biodemography may be better referred to as a superfield Because biodemography so naturally crosses interdisciplinary boundaries and because its application draws together researchers from disparate disciplines it may well be more appropriate to consider that biodemography subsumes a number of other disciplines rather than the other way around In this preface we will describe our own efforts and those of many others to promote and develop the study of human fertility using methods models and theories from both biological and demographic domains In December 1997 25 participants from three different countries gathered in Tucson Arizona for a small conference with the title Genetic Influences on Fertility Related Processes That conference represented a fascinating blending of research from two apparently separate domains **Reproductive Ecology and Human Evolution** Peter Thorpe Ellison, 2001 The study of human reproductive ecology represents an important new development in human evolutionary biology Its focus is on the physiology of human reproduction and evidence of adaptation and hence the action of natural selection in that domain But at the same time the study of human reproductive ecology provides an important perspective on the historical process of human evolution a lens through which we may view the forces that have shaped us as a species In the end all actions of natural selection can be reduced to variation in the reproductive success of individuals Peter Ellison is one of the pioneers in the fast growing area of reproductive ecology He has collected for this volume the research of thirty one of the most active and influential scientists in the field Thanks to recent noninvasive techniques these contributors can present direct empirical data on the effect of a broad array of ecological behavioral and constitutional variables on the reproductive processes of humans as well as wild primates Because biological evolution is cumulative however organisms in the present must be viewed as products of the selective forces of past environments The study of adaptation thus often involves inferences about formative ecological relationships that may no longer exist or not in the same form Making such inferences depends on carefully weighing a broad range of evidence drawn from studies of contemporary ecological variation comparative studies of related taxonomies and paleontological and genetic evidence of evolutionary history The result of this inquiry sheds light not only on the functional aspects of an organism s contemporary biology but also on its evolutionary history and the selective forces that have shaped it through time Encompassing a range of viewpoints controversy along with consensus this far ranging

collection offers an indispensable guide for courses in biological anthropology human biology and primatology along with demography medicine social anthropology and public health Peter T Ellison is professor of anthropology and dean of the Graduate School of the Arts and Sciences at Harvard University He is the author of *On Fertile Ground* and numerous papers in scientific journals that have made leading contributions to the field of reproductive ecology **Human Fertility** Robert Carter Cook,1951 *The Population Problem* Alexander Morris Carr-Saunders,1922 *The Evolution of Man* ,1909

Sexual Selection and the Descent of Man Bernard Campbell,2017-07-12 Just over one hundred and thirty years ago Charles Darwin in *The Descent of Man and Selection in Relation to Sex* 1871 developed remarkably accurate conclusions about man s ancestry based on a review of general comparative anatomy and psychology in which he regarded sexual selection as a necessary part of the evolutionary process But the attention of biologists turned to the more general concept of natural selection in which sexual selection plays a complex role that has been little understood This volume significantly broadens the scope of modern evolutionary biology by looking at this important and long neglected concept of great importance In this book which is the first full discussion of sexual selection since 1871 leading biologists bring modern genetic theory and behavior observation to bear on the subject The distinguished authors consider many aspects of sexual selection in many species including man within the context of contemporary evolutionary theory and research The result is a remarkably original and well rounded view of the whole concept that will be invaluable especially to students of evolution and human sexual behavior The lucid authority of the contributors and the importance of the topic will interest all who share in man s perennial fascination with his own history The book will be of central importance to a wide variety of professionals including biologists anthropologists and geneticists It will be an invaluable supplementary text for courses in vertebrate biology theory of evolution genetics and physical anthropology It is especially important with the emergence of alternative explanations of human development under the rubric of creationism and doctrines of intelligent design **How Women Got Their Curves and Other Just-So Stories** David P Barash,Judith Eve Lipton,2009-04-28 The authors of *Gender Gap* *The Biology of Male Female Differences* take readers on a joyride of intellectual discovery full of provocative ideas Pepper Schwartz author of *Prime* So how did women get their curves Why do they have breasts while other mammals only develop breast tissue while lactating and why do women menstruate when virtually no other beings do so What are the reasons for female orgasm Why are human females kept in the dark about their own time of ovulation and maximum fertility and why are they the only animals to experience menopause David P Barash and Judith Eve Lipton coauthors of acclaimed books on human sexuality and gender discuss the theories scientists have advanced to explain these evolutionary enigmas sometimes called Just So stories by their detractors and present hypotheses of their own Some scientific theories are based on legitimate empirical data while others are pure speculation Barash and Lipton distinguish between what is solid and what remains uncertain skillfully incorporating their expert knowledge of biology psychology animal behavior anthropology and

human sexuality into their entertaining critiques Inviting readers to examine the evidence and draw their own conclusions Barash and Lipton tell an evolutionary suspense story that captures the excitement and thrill of true scientific detection A delightful thought provoking volume on perennial questions about female biology Along the way they present a large amount of accessible information about biology psychology physiology and anatomy Even more important they demonstrate how scientists work to create and assess hypotheses while having a great deal of fun Publishers Weekly *Genetic Influences on Human Fertility and Sexuality* Joseph Lee Rodgers, David C. Rowe, Warren B. Miller, 2012-12-06 Recent work in quantitative biology has shown theoretically why Fisher's Fundamental Theorem of Natural Selection does not preclude genetic influences on fertility sexuality and related processes Genetic Influences on Human Fertility and Sexuality takes the next step and presents a number of successful empirical searches for such genetic influence on a broad range of processes such as puberty marriage sexual behavior and twinning Employing a broad range of methodological approaches including molecular and behavioral genetics this book weaves a new theoretical framework that shows how genes can help relate fertility planning to fertility outcome and how puberty sexuality marriage and reproduction can be conceptually linked through the genes that contribute to individual differences in the human process **The 10,000 Year Explosion** Gregory

Cochran, Henry Harpending, 2009-01-27 Resistance to malaria Blue eyes Lactose tolerance What do all of these traits have in common Every one of them has emerged in the last 10 000 years Scientists have long believed that the great leap forward that occurred some 40 000 to 50 000 years ago in Europe marked end of significant biological evolution in humans In this stunningly original account of our evolutionary history top scholars Gregory Cochran and Henry Harpending reject this conventional wisdom and reveal that the human species has undergone a storm of genetic change much more recently Human evolution in fact accelerated after civilization arose they contend and these ongoing changes have played a pivotal role in human history They argue that biology explains the expansion of the Indo Europeans the European conquest of the Americas and European Jews rise to intellectual prominence In each of these cases the key was recent genetic change adult milk tolerance in the early Indo Europeans that allowed for a new way of life increased disease resistance among the Europeans settling America and new versions of neurological genes among European Jews Ranging across subjects as diverse as human domestication Neanderthal hybridization and IQ tests Cochran and Harpending's analysis demonstrates convincingly that human genetics have changed and can continue to change much more rapidly than scientists have previously believed A provocative and fascinating new look at human evolution that turns conventional wisdom on its head The 10 000 Year Explosion reveals the ongoing interplay between culture and biology in the making of the human race
