|-----------|-----------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>7A</b> | 7A 76a<br>   | 7A 76b<br>   | 7A 161a<br>  | Students count up to 10 pictures and dots individually and as a group. Mastery is gradual and the eventual goal is for students to be able to say the total number of objects in each group without counting.                                                                                                                                                                                                                             |
| <b>6A</b> | 6A 37a<br>   | 6A 100a<br>  | 6A 173a<br>  | Students count up to 30 using pictures and numbers. Gradually, students learn to recognize groups of up to 20 dots without counting them individually.                                                                                                                                                                                                                                                                                    |
| <b>5A</b> | 5A 41a<br>   | 5A 147a<br>  | 5A 187a<br>  | Students learn to use a pencil through line tracing exercises, beginning with short lines and advancing to long curved lines. The curved lines gradually take the shape of large numbers. This develops the fine motor skills needed to trace and write numbers independently and teaches the natural stroke order required for number formation. Students also develop their concentration ability and learn to recite numbers up to 50. |
| <b>4A</b> | 4A 40a<br>   | 4A 79a<br>   | 4A 191b<br>  | Students learn to write numbers up to 50. Students deepen their understanding of the number sequence through writing consecutive numbers and filling in the blanks in number tables, number boards, and complete-the-sequence problems. By the end of the level, students learn to read up to 100.                                                                                                                                        |
| <b>3A</b> | 3A 69b<br>   | 3A 74a<br>   | 3A 195a<br>  | Students continue to enhance their understanding of the sequence of numbers as well as the number-writing skills that they developed in Level 4A. Students are introduced to addition in Level 3A. At first, they master +1, +2, through +3 individually. The last 20 sheets of this level are dedicated to addition questions from +1 to +3.                                                                                             |
| <b>2A</b> | 2A 31a<br>   | 2A 78b<br>   | 2A 200b<br>  | In this level, students further develop basic mental calculation skills in addition through a sequential study of adding 4 through adding 10. It is very important that students master the contents of this level for smooth progress in subsequent levels. Level 2A aims to develop the concentration ability and work skills necessary for Level A.                                                                                    |
| <b>A</b>  | A 66a<br>    | A 81a<br>    | A 191a<br>   | Level A continues horizontal addition with larger numbers. Mastering addition ensures a smooth introduction to subtraction in this level. This level aims to develop mental calculations, while strengthening students' concentration ability and their work skills.                                                                                                                                                                      |
| <b>B</b>  | B 80b<br>   | B 187a<br>  | B 199a<br>  | This level teaches vertical addition and subtraction. Throughout it, students will encounter their first word problems in Kumon. This level draws on the advanced mental calculation skills learned in previous levels when students "carry" in addition questions and "borrow" in questions involving subtraction. Mastery of Level B greatly reduces errors in multiplication and division in Levels C and D.                           |
| <b>C</b>  | C 32a<br>  | C 121a<br> | C 200b<br> | Students master the multiplication tables by practicing until they can answer immediately. Next, students learn up to 4-digit by 1-digit multiplication with mental carryovers. Once multiplication is mastered, simple division by 1-digit is introduced. Students who have developed good mental calculation ability will not have to write division steps.                                                                             |
| <b>D</b>  | D 115b<br> | D 126b<br> | D 166a<br> | Students learn double digit multiplication before advancing to long division. In this challenging section, students develop estimation skills that will be necessary for future fraction work. Once students' ability to work with all 4 arithmetic operations is confirmed, they begin to study fractions, learning to reduce using the Greatest Common Factor.                                                                          |
| <b>E</b>  | E 131a<br> | E 179b<br> | E 196a<br> | Students learn to add, subtract, multiply, and divide fractions. Proper intermediate steps are emphasized. At the end of the level, students learn basic fraction/decimal conversions.                                                                                                                                                                                                                                                    |
