Introduction to Simulink with Engineering Applications Steven T. Karris, 2006 This text is an introduction to Simulink a companion application to MATLAB It is written for students at the undergraduate and graduate programs as well as for the working professional Although some previous knowledge of MATLAB would be helpful it is not absolutely necessary Appendix A of this text is an Introduction to MATLAB to enable the reader to begin learning both MATLAB and Simulink to perform graphical computations and programming Chapters 2 through 18 describe the blocks of all Simulink libraries Their application is illustrated with practical examples through Simulink models some of which are supplemented with MATLAB functions commands and statements Chapters 1 and 19 contain several Simulink models to illustrate various applied math and engineering applications Appendix B is an introduction to difference equations as they apply to discrete time systems and Appendix C introduces the reader to random generation procedures This text supplements our Numerical Analysis with MATLAB and Spreadsheet Applications ISBN 0 9709511 1 6 It is self contained the blocks of each library are described in an orderly fashion that is consistent with Simulink's documentation This arrangement provides insight into how a model is used and how its parts interact with each another Like MATLAB Simulink can be used with both linear and nonlinear systems which can be modeled in continuous time sample time or a hybrid of these Examples are provided in this text Most of the examples presented in this book can be implemented with the Student Versions of MATLAB and Simulink A few may require the full versions of these outstanding packages and can be skipped Some add ons known as Toolboxes and Blocksets can be obtained from The MathWorks Inc 3 Apple Hill Drive Natick MA 01760 2008 USA www.mathworks.com

Introduction to Simulink with Engineering Applications, Second Edition Steven T. Karris, 2005* *Engineering Applications of MATLAB® 5.3 and SIMULINK®* 3 Mohand Mokhtari, Michel Marie, 2012-12-06 In recent years MATLAB together with SIMULINK and the many associated toolboxes has become a standard in the fields of engineering simulation and numerical calculation A veritable programming environment in themselves MATLAB and SIMULINK bring unequalled possibilities of resolution and simulation in the fields of numerical calculation and the study of dynamic systems to students and professionals alike These features are enhanced by excellent graphic visualisation in 2D and 3D The originality of this book is to intelligently marry theory and practice The theory is exposed in the first half of the work the second part of the work being devoted to the study of real applications of control process and signal processing This approach allows the reader at any stage to see the importance of the theory worked out in practical examples and follow the examples with their theoretical structure presented

in a clear and concise way The presentation of these applications begins with an initial mathematical study of the physical processes leading to the discrete modelling stage In each of these case studies the authors demonstrate the power of MATLAB and SIMULINK tools as well as the power of the toolboxes dedicated to the control of processes fuzzy logic neuronal networks and signal processing This enlightening approach gives the reader novice or specialist a clear and thorough understanding of these tools
