

Basic Java Interview Questions And Answers

1. Why is the main method static ?

Ans: So that it can be invoked without creating an instance of that class

2. What is the difference between class variable, member variable and automatic(local) variable ?

Ans: - class variable is a static variable and does not belong to instance of class but rather shared across all the instances

- member variable belongs to a particular instance of class and can be called from any method of the class

- automatic or local variable is created on entry to a method and has only method scope

3. When are static and non static variables of the class initialized ?

Ans: The static variables are initialized when the class is loaded Non static variables are initialized just before the constructor is called

4. When are automatic variable initialized ?

Ans: Automatic variable have to be initialized explicitly

5. What is a modulo operator % ?

Ans: This operator gives the value which is related to the remainder of a division.e.g $x=7\%4$ gives remainder 3 as an answer

6. How is an argument passed in java, by copy or by reference What is a modulo operator % ?

Ans: This operator gives the value which is related to the remainder of a division.e.g $x=7\%4$ gives remainder 3 as an answer

7. What is garbage collection ?

Ans: The runtime system keeps track of the memory that is allocated and is able to determine whether that memory is still useable. This work is usually done in background by a low-priority thread that is referred to as garbage collector. When the gc finds memory that is no longer accessible from any live thread it takes steps to release it back to the heap for reuse

8. Does System.gc and Runtime.gc() guarantee garbage collection ?

Ans: No

9. What are different types of operators in Java ?

Ans: - Unary ++, --, +, -, !, ~, ()

- Arithmetic *, /, %, +, -

-Shift <<, >>, >>>

- Comparison ==, instanceof, !=Bitwise &, ^, |Short Circuit &&, ||

Java Interview Questions and Answers

Navneet Singh, Java interview questions often cover a broad range of topics including core Java concepts, object oriented programming principles, data structures, algorithms, Java APIs, and best practices. Here are some common Java interview questions along with sample answers.

What is Java? Java is a high level object oriented programming language developed by Sun Microsystems, now owned by Oracle. It is designed to be platform independent, allowing developers to write code once and run it on any Java enabled platform without recompilation.

What are the main features of Java? Some of the main features of Java include Platform independence (Java programs can run on any platform with a Java Virtual Machine (JVM)), Object oriented (Java supports object oriented programming principles such as encapsulation, inheritance, and polymorphism), Robustness (Java provides strong memory management, exception handling, and type checking mechanisms to ensure robust and reliable code), Multi threading (Java supports concurrent execution of multiple threads, allowing developers to write scalable and responsive applications), Portability (Java programs are portable across different platforms, making them suitable for developing cross platform applications).

What is the difference between JDK, JRE, and JVM? JDK (Java Development Kit) is a software development kit that includes tools for developing and compiling Java applications, such as the Java compiler (javac) and the Java runtime environment (JRE). JRE (Java Runtime Environment) is a runtime environment that provides the necessary libraries and components to run Java applications. It includes the JVM (Java Virtual Machine) and core Java libraries. JVM (Java Virtual Machine) is an abstract computing machine that provides an execution environment for Java bytecode. It interprets and executes Java bytecode instructions and manages memory, threads, and other runtime aspects of Java applications.

What is the difference between abstract class and interface in Java? An abstract class is a class that cannot be instantiated and may contain abstract methods (methods without a body) as well as concrete methods. It can also contain instance variables and constructors. Subclasses of an abstract class must implement all abstract methods or be declared abstract themselves. An interface is a reference type in Java that defines a contract of methods that a class must implement. It can only contain constant variables and method signatures without method bodies. A class can implement multiple interfaces but can only extend one abstract class.

What is the difference between ArrayList and LinkedList in Java? ArrayList is implemented as a dynamic array, meaning that it stores elements in a contiguous memory location and supports random access to elements using an index. It is efficient for accessing elements by index but less efficient for inserting or removing elements from the middle of the list. LinkedList is implemented as a doubly linked list, meaning that it stores elements as nodes with references to both the previous and next nodes. It is efficient for inserting or removing elements from the middle of the list but less efficient for random access. These are just a few examples of Java interview questions.

Depending on the role and level of the interview questions may cover more advanced topics such as design patterns concurrency memory management and performance optimization It s important to thoroughly prepare for interviews by reviewing core Java concepts practicing coding exercises and gaining hands on experience with Java programming

Cracking The Java Coding Interview Hand Book 2014 Harry Hariom Choudhary,2013-07-28 I am not a recruiter I am a software engineer And as such I know what it s like to be asked to whip up brilliant algorithms on the spot and then write flawless code on a whiteboard I know because I ve been asked to do the same thing in interviews at Google Microsoft Apple and Amazon among other companies According to the Last year and this year Data that we have collected from different sources More than 5 67 000 students and IT professionals gone through this book and Successfully secured their jobs in IT industry and Other industries as well I also know because I ve been on the other side of the table asking candidates to do this I ve combed through stacks of resumes to find the engineers who I thought might be able to actually pass these interviews And I ve debated in Google s Hiring Committee whether or not a candidate did well enough to merit an offer I understand and have experienced the full hiring circle And you reader are probably preparing for an interview perhaps tomorrow next week or next year You likely have or are working towards a Computer Science or related degree I am not here to re teach you the basics of what a binary search tree is or how to traverse a linked list You already know such things and if not there are plenty of other resources to learn them This book is here to help you take your understanding of Computer Science fundamentals to the next level to help you apply those fundamentals to crack the coding interview Because while the fundamentals are necessary to land one of the top jobs they aren t always enough For countless readers this book has been just what they needed *Cracking The Java Coding Interview 2014 Edition* Total 1000 Java Programming Questions and Solutions Java J2EE Including 1000 Questions Answers 4 Every step of Interview Process The full list of topics are as follows
