

10 Challenging Problems in Data Mining Research

prepared for ICDM 2005

1. Developing a Unifying Theory of Data Mining

- ☐ The current state of the art of data-mining research is too “ad-hoc”
 - techniques are designed for individual problems
 - no unifying theory
- ☐ Needs unifying research
 - Exploration vs explanation
- ☐ Long standing theoretical issues
 - How to avoid spurious correlations?
- ☐ Deep research
 - Knowledge discovery on hidden causes?
 - Similar to discovery of Newton's Law?

An Example (from Tutorial Slides by [Andrew Moore](#)):

- ☐ VC dimension. If you've got a learning algorithm in one hand and a dataset in the other hand, to what extent can you decide whether the learning algorithm is in danger of overfitting or underfitting?
 - formal analysis into the fascinating question of how overfitting can happen,
 - estimating how well an algorithm will perform on future data that is solely based on its training set error,
 - a property (VC dimension) of the learning algorithm. VC-dimension thus gives an alternative to cross-validation, called Structural Risk Minimization (SRM), for choosing classifiers.
 - CV, SRM, AIC and BIC.

2. Scaling Up for High Dimensional Data and High Speed Streams

- ☐ Scaling up is needed
 - ultra-high dimensional classification problems (millions or billions of features, e.g., bio data)
 - Ultra-high speed data streams
