Fray, 2004-03 Titanium and titanium alloys are used in many demanding applications in aerospace and terrestrial systems because of their excellent combination of mechanical properties and corrosion resistance. However, high costs resulting from an energy intensive extraction process and complex fabrication sequence exclude titanium alloys from many applications. This proceedings volume will address all aspects of potential cost reduction of titanium alloys covering such segments of titanium technology as extraction, creative melting including cold hearth approaches, near net shape techniques, processing and fabrication advances, high speed machining and knowledge based processing with emphasis on computer aided approaches, improved process control and creative designs. This volume will be of widespread interest to materials scientists and engineers working in the aerospace, automobile, chemical, processing, medical and consumer industries.
