R. Bowker LLC,1978 **Science News-letter** ,1965 **Magnificent Mistakes in Mathematics** Alfred S. Posamentier,Ingmar Lehmann,2013-08-13 Two veteran math educators demonstrate how some magnificent mistakes had profound consequences for our understanding of mathematics key concepts In the nineteenth century English mathematician William Shanks spent fifteen years calculating

the value of π setting a record for the number of decimal places. Later his calculation was reproduced using large wooden numerals to decorate the cupola of a hall in the Palais de la Découverte in Paris. However, in 1946, with the aid of a mechanical desk calculator that ran for seventy hours, it was discovered that there was a mistake in the 528th decimal place. Today, supercomputers have determined the value of π to trillions of decimal places. This is just one of the amusing and intriguing stories about mistakes in mathematics in this layperson's guide to mathematical principles. In another example, the authors show that when we prove that every triangle is isosceles, we are violating a concept not even known to Euclid: that of betweenness. And if we disregard the time-honored Pythagorean theorem, this is a misuse of the concept of infinity. Even using correct procedures can sometimes lead to absurd but enlightening results. Requiring no more than high school level math competency, this playful excursion through the nuances of math will give you a better grasp of this fundamental, all-important science.
