

Evolution and Selection

What mechanisms lead to changes in the diversity of species on Earth?

Why?

People make choices by selecting options they like best. The natural world also 'selects' (although not as a conscious decision) when environmental conditions allow organisms with a particular genetic trait to live healthier lives than other organisms. In this activity, we will explore how selection affects populations over time.

Model 1 – Desktop Swab Results

1. What is the source of the bacteria in the culture tube in Model 1?

The bacteria in model 1 comes from the top of a desktop so it most likely came from human sources that have contact with the desk top.

2. How many genetic variants of *E. coli* were present in the culture from the initial swab?

There were four genetic variants of *E. coli* present in the initial swab.

3. What variants of *E. coli* are found on the dish grown without triclosan?

All four variants of *E. coli* are found on the dish grown without the triclosan.

4. Refer to the dish in Model 1 with the medium that included triclosan.

- a. What variants of *E. coli* are found on the dish grown with triclosan?

The only variant of *E. coli* found on the dish grown with triclosan is Variant S.

- b. What likely happened to the other variants of *E. coli* on the dish with the medium containing triclosan?

The other bacteria was likely killed by the triclosan.

The Role of Selection in Speciation Judith Masters, **Natural Selection and Its Constraints** Oliver Mayo, 1983
Speciation, 2001 Selection and Speciation MacDonald, *Selection* Graham Bell, 2008-12-18 This book adopts an experimental approach to understanding the mechanisms of evolution and the nature of evolutionary processes with examples drawn from microbial plant and animal systems It incorporates insights from remarkable recent advances in theoretical modelling and the fields of molecular genetics and environmental genomics Adaptation is caused by selection continually winnowing the genetic variation created by mutation In the last decade our knowledge of how selection operates on populations in the field and in the laboratory has increased enormously and the principal aim of this book is to provide an up to date account of selection as the principal agent of evolution In the classical Fisherian model weak selection acting on many genes of small effect over long periods of time is responsible for driving slow and gradual change However it is now clear that adaptation in laboratory populations often involves strong selection acting on a few genes of large effect while in the wild selection is often strong and highly variable in space and time Indeed these results are changing our perception of how evolutionary change takes place This book summarizes our current understanding of the causes and consequences of selection with an emphasis on quantitative and experimental studies It includes the latest research into experimental evolution natural selection in the wild artificial selection selfish genetic elements selection in social contexts sexual selection and speciation **The Origin of Species by Means of Natural Selection** Charles Darwin, 2012-01 Unlike some other reproductions of classic texts 1 We have not used OCR Optical Character Recognition as this leads to bad quality books with introduced typos 2 In books where there are images such as portraits maps sketches etc We have endeavoured to keep the quality of these images so they represent accurately the original artefact Although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy ORIGIN OF SPECIES BY MEANS OF NATURAL SELECTION CHARLES. DARWIN, 2018 Animal Species and Evolution Ernst Mayr, 1963 This masterly and long awaited work is a full exposition synthesis summation and critical evaluation of the present state of man s knowledge about the nature of animal species and of the part they play in the processes of evolution In a series of twenty chapters Mr Mayr presents a consecutive story beginning with a description of evolutionary biology and ending with a discussion of man as a biological species Calling attention to unsolved problems and relating the evolutionary subject matter to appropriate material from other fields such as physiology genetics and biochemistry the author integrates and interprets existing data Believing that an unequivocal stand is more likely to produce constructive criticism than evasion of an issue he does not hesitate to choose that interpretation of a controversial matter which to him seems most consistent with the emerging picture of the evolutionary process Between the terminal points mentioned above Mr Mayr pursues the narrative through discussions of species concepts and their application morphological species characters and sibling species

biological properties of species isolating mechanisms hybridization the variation and genetics of populations storage and protection of genetic variation the unity of the genotype geographic variation the polytypic species of the taxonomist the population structure of species kinds of species multiplication of species geographic speciation the genetics of speciation the ecology of speciation and species and transpecific evolution The volume provides a valuable glossary and an inclusive bibliography greatly extends its range for those who wish to investigate special aspects of the material Animal Species and Evolution is presented as a permanent entity In accordance with the author s feeling that the acquisition of new knowledge will require a new statement rather than an emendation of a previous one no substantive revisions of this volume are planned for future printings Because of the impossibility of experimenting with man and because an understanding of man s biology is indispensable for safeguarding his future emphasis throughout this book is placed on those findings from the higher animals which are directly applicable to man In his final chapter on hominids and the various forms of Homo Mr Mayr comes to the conclusion that while modern man appears to be just as well adapted for survival purposes as were his ancestors there is much evidence to suggest that he is threatened by the loss of his most typically human characteristics It would be within his power to reverse this tendency

On the Origin of Species by Means of Natural Selection Or the Preservation of Favoured Races in the Struggle for Life. (2nd Edition) Darwin Charles, 2016-06-23 Unlike some other reproductions of classic texts 1 We have not used OCR Optical Character Recognition as this leads to bad quality books with introduced typos 2 In books where there are images such as portraits maps sketches etc We have endeavoured to keep the quality of these images so they represent accurately the original artefact Although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy
