Signals From The Subatomic World How To Build A Proton Precession Magnetometer:

Signals from the Subatomic World: How to Build a Proton Precession Magnetometer , Mobile NMR and MRI Michael L. Johns, Einar O. Fridjonsson, Sarah J. Vogt, Agnes Haber, 2015-10-27 There has been a recent surge in hardware developments with respect to mobile NMR and MRI systems from which novel applications are starting to emerge. These comparatively low cost systems allow either for more routine use of NMR and MRI generally for material quality control or they allow for the analysis of samples whose size and shape precludes conventional NMR and MRI application. This book will for the first time summarise these recent hardware developments, highlight the challenges facing mobile and generally low field NMR and MRI and describe various applications. Including chapters on commercial applications in well logging and food content measurements, the broad appeal of this book will fill a gap in the literature for NMR spectroscopists, analytical chemists and all those involved in measurement science in both industry and academia. *A Deep-towed Proton Magnetometer* J. F. Cottone, 1963 A proton precession magnetometer has been developed to measure the geomagnetic field intensity at the ocean floor. The instrument was built on short notice to support the search for the SSN Thresher and was operated at a depth of 1300 fathoms while being towed at two knots. A promising magnetic contact was made and verified by two subsequent crossings during about one hundred hours of operation and the instrument was not used further. A brief description of the instrument construction and operation is presented and some salient design features of the electronics and deep towed vehicle are discussed and illustrated. Author
