Seismic Behaviour and Design of Irregular and Complex Civil Structures II Zbigniew Zembaty, Mario De Stefano, 2015-11-04 Irregular engineering structures are subjected to complicated additional loads which are often beyond conventional design models developed for traditional simplified plane models This book covers detailed research and recent progress in seismic engineering dealing with seismic behaviour of irregular and set back engineering structures Experimental results as well as special topics of modern design are discussed in detail In addition recent progress in seismology wave propagation and seismic engineering which provides novel modern modelling of complex seismic loads is reported Particular emphasis is placed on the newly developed rotational seismic ground motion effects This book is a continuation of an earlier monograph which appeared in the same Springer series in 2013 <http://www.springer.com/gp/book/9789400753761> Optimization of Tuned Mass Dampers Gebrail Bekdas, Sinan Melih Nigdeli, 2022-04-07 This book is a timely book to summarize the latest developments in the optimization of tuned mass dampers covering all classical approaches and new trends including metaheuristic algorithms Also artificial intelligence and machine learning methods are included to predict optimum results by skipping long optimization processes Another difference and advantage of the book are to provide chapters about several types of control types including passive tuned mass dampers active tuned mass dampers tuned liquid dampers tuned liquid column dampers and inerter dampers Tuned mass dampers TMDs are vibration absorber devices used in all types of mechanic systems The key factor in the design is an effective tuning of TMDs for the desired performance In practice several high rise structures and bridges were designed by including TMDs Also TMDs were installed after the construction of the structures after several negative experiences resulting from the disturbing sway of the structures In optimum design several closed form expressions have been proposed for optimum frequency and damping ratio of TMDs but the exact optimization requires iterative optimization approaches The current trend is to use evolutionary algorithms and metaheuristic optimization methods to reach the goal Seismic Isolation, Energy Dissipation and Active Vibration Control of Structures Gian Paolo Cimellaro, 2023-01-06 This volume gathers the proceedings of the 17th World Conference on Seismic Isolation 17WCSI held in Turin Italy on September 11-15 2022 Endorsed by ASSISI Association Anti Seismic Systems International Society the conference discussed state of the art information as well as emerging concepts and innovative applications related to seismic isolation energy dissipation and active vibration control of structures resilience and sustainability The volume covers highly diverse topics including earthquake resistant construction protection from natural and man made impacts safety of structures vulnerability international standards on structures with seismic isolation seismic isolation in existing structures and cultural heritage seismic isolation in high rise buildings seismic protection of non structural elements equipment and statues The contributions which are published after a rigorous international peer review process highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaboration
