Proceeding of Fifth International Conference on Microelectronics, Computing and Communication Systems

Vijay Nath,J. K. Mandal,2021-09-09 This book presents high quality papers from the Fifth International Conference on Microelectronics Computing Communication Systems MCCS 2020 It discusses the latest technological trends and advances in MEMS and nanoelectronics wireless communication optical communication instrumentation signal processing image processing bioengineering green energy hybrid vehicles environmental science weather forecasting cloud computing renewable energy RFID CMOS sensors actuators transducers telemetry systems embedded systems and sensor network applications It includes papers based on original theoretical practical and experimental simulations development applications measurements and testing The applications and solutions discussed here provide excellent reference material for future product development *Proceedings of 2013 Chinese Intelligent Automation Conference* Zengqi Sun,Zhidong

Deng,2013-07-10 Proceedings of the 2013 Chinese Intelligent Automation Conference presents selected research papers from the CIAC 13 held in Yangzhou China The topics include e g adaptive control fuzzy control neural network based control knowledge based control hybrid intelligent control learning control evolutionary mechanism based control multi sensor integration failure diagnosis and reconfigurable control Engineers and researchers from academia industry and government can gain an inside view of new solutions combining ideas from multiple disciplines in the field of intelligent automation Zengqi Sun and Zhidong Deng are professors at the Department of Computer Science Tsinghua University China

AI-based Energy Storage Systems Muhammad Khalid,Elżbieta Jasińska,2025-08-07 As the world transitions toward a more sustainable energy future the role of storage facilities has become crucial to realizing this vision This call for papers invites researchers professionals and experts in the field of power storage and smart power infrastructure to share their findings and insights The purpose of this Research Topic is to investigate cutting edge technologies and strategies that facilitate the efficient integration of advanced storage systems and their seamless integration with traditional energy infrastructures Advanced energy storage systems and its impacts on grid management and control demand response optimization algorithms and innovative grid architectures with improved energy storage geothermal chemical and hydro are of particular interest **Advances in Communication, Signal Processing, VLSI, and Embedded Systems** Shubhakar

Kalya,Muralidhar Kulkarni,K.S. Shivaprakasha,2019-11-30 This book comprises selected peer reviewed papers from the International Conference on VLSI Signal Processing Power Systems Illumination and Lighting Control Communication and Embedded Systems VSPICE 2019 The contents are divided into five broad topics VLSI and embedded systems signal processing power systems illumination and control and communication and networking The book focuses on the latest innovations trends and challenges encountered in the different areas of electronics and communication and electrical engineering It also offers potential solutions and provides an insight into various emerging areas such as image fusion bio

sensors and underwater sensor networks This book can prove to be useful for academics and professionals interested in the various sub fields of electronics and communication engineering **Energy, Environment and Sustainable Development**

Tianharry Chang,2012-12-13 Selected peer reviewed papers from the 2012 Asian Pacific Conference on Energy Environment and Sustainable Development APEESD 2012 November 12 13 Kuala Lumpur Malaysia *Intelligent Computing Techniques for Smart Energy Systems* Anshuman Tripathi,Amit Soni,Ashish Shrivastava,Anil Swarnkar,Jagrati Sahariya,2022-06-13 This book compiles the best selected research papers presented during the 2nd International Conference on Intelligent Computing Techniques for Smart Energy Systems ICTSES 2021 held at Manipal University Jaipur Rajasthan India It presents the diligent work of the research community where intelligent computing techniques are applied in allied fields of engineering ranging from engineering materials to electrical engineering to electronics and communication engineering to computer related fields The theoretical research concepts are supported with extensive reviews highlighting the trends in the possible and real life applications of computational intelligence The high quality content with broad range of the topics is thoroughly peer reviewed and published on suitable recommendations **Proceedings of Symposium on Power Electronic and Renewable Energy Systems Control** Sankarsan Mohapatro,Jonathan Kimball,2021-07-09 This book includes high quality research papers presented at Symposium on Power Electronic and Renewable Energy Systems Control PERESC 2020 which is held at the School of Electrical Sciences IIT Bhubaneswar Odisha India during 4 5 December 2020 The book covers original work in power electronics which has greatly enabled integration of renewable and distributed energy systems control of electric machine drives high voltage system control and operation The book is highly useful for academicians engineers researchers and students to be familiar with the latest state of the art in power electronics technology and its applications Energy Conservation in Residential, Commercial, and Industrial Facilities Hossam A. Gabbar,2018-06-27 An authoritative and comprehensive guide to managing energy conservation in infrastructures Energy Conservation in Residential Commercial and Industrial Facilities offers an essential guide to the business models and engineering design frameworks for the implementation of energy conservation in infrastructures The presented models of both physical and technological systems can be applied to a wide range of structures such as homes hotels public facilities industrial facilities transportation and water energy supply systems The authors noted experts in the field explore the key performance indicators that are used to evaluate energy conservation strategies and the energy supply scenarios as part of the design and operation of energy systems in infrastructures The text is based on a systems approach that demonstrates the effective management of building energy knowledge and supports the simulation evaluation and optimization of several building energy conservation scenarios In addition the authors explore new methods of developing energy semantic network ESN superstructures energy conservation optimization techniques and risk based life cycle assessments This important text Defines the most effective ways to model the infrastructure of physical and technological systems Includes information on the

most widely used techniques in the validation and calibration of building energy simulation Offers a discussion of the sources quantification and reduction of uncertainty Presents a number of efficient energy conservation strategies in infrastructure systems including HVAC lighting appliances transportation and industrial facilities Describes illustrative case studies to demonstrate the proposed energy conservation framework practices methods engineering designs control and technologies Written for students studying energy conservation as well as engineers designing the next generation of buildings Energy Conservation in Residential Commercial and Industrial Facilities offers a wide ranging guide to the effective management of energy conservation in infrastructures
